Money And Stock Prices:

Money, Stock Prices and Central Banks Marcel Wiedmann, 2011-05-05 This contribution applies the cointegrated vector autoregressive CVAR model to analyze the long run behavior and short run dynamics of stock markets across five developed and three emerging economies The main objective is to check whether liquidity conditions play an important role in stock market developments As an innovation liquidity conditions enter the analysis from three angles in the form of a broad monetary aggregate the interbank overnight rate and net capital flows which represent the share of global liquidity that arrives in the respective country A second aim is to understand whether central banks are able to influence the stock market
