Kate Frommer Cik,2020-06-10 Anxiety is something that millions of people struggle with on a daily basis and teenagers are no exception By some estimates nearly one in three teenagers have a diagnosable anxiety disorder Yet many people feel isolated and alone with their experience of anxiety it can feel like a subject that is off limits and is often overlooked by parents and friends until it has reached a crisis level In Anxiety The Ultimate Teen Guide Kate Frommer Cik provides valuable information for young adults who are struggling with anxiety whether it is mild or severe Cik explores what anxiety is and why we have it and explains the different types of anxieties anxiety triggers coping strategies and possible paths of treatment The many personal stories from teenagers shared in this book show that anxiety is not something you have to go through alone while also revealing how varied anxiety can be from one individual to the next Their insight into what worked for them delivers helpful firsthand accounts of how relief from anxiety is possible Drawing upon up to date research and interviews Anxiety The Ultimate Teen Guide will help young adults better understand why they suffer from anxiety and what they can do to successfully treat it making this a valuable resource for teens their family and friends **Stepped Care 2.0: Anxiety**

A Paradigm Shift in Mental Health Peter Cornish,2020-06-13 This book is a primer on Stepped Care 2.0 It is the first book in a series of three This primer addresses the increased demand for mental health care by supporting stakeholders help seekers providers and policy makers to collaborate in enhancing care outcomes through work that is both more meaningful and sustainable Our current mental health system is organized to offer highly intensive psychiatric and psychological care While undoubtedly effective demand far exceeds the supply for such specialized programming Many people seeking to improve their mental health do not need psychiatric medication or sophisticated psychotherapy A typical help seeker needs basic support For knee pain a nurse or physician might first recommend icing and resting the knee working to achieve a healthy weight and introducing low impact exercise before considering specialist care Unfortunately there is no parallel continuum of care for mental health and wellness As a result a person seeking the most basic support must line up and wait for the specialist along with those who may have very severe and or complex needs Why are there no lower intensity options

One reason is fear and stigma A thorough assessment by a specialist is considered best practice After all what if we miss signs of suicide or potential harm to others A reasonable question on the surface however the premise is flawed First the risk of suicide or threat to others for those already seeking care is low Second our technical capacity to predict on these threats is virtually nil Finally assessment in our current culture of fear tends to focus more on the identification of deficits as opposed to functional capacities leading to over prescription of expensive remedies and lost opportunities for autonomy and self management Despite little evidence linking assessment to treatment outcomes and no evidence supporting our capacity to detect risk for harm we persist with lengthy intake assessments and automatic specialist referrals that delay care Before providers and policy makers can feel comfortable letting go of risk assessment however they need to understand the forces underlying the risk paradigm that dominates our society and restricts creative solutions for supporting those in need
