Mathematical Methods In Optimization Of Differential Systems:

Mathematical Methods in Optimization of Differential Systems Viorel Barbu, 2012-01-10 This work is a revised and enlarged edition of a book with the same title published in Romanian by the Publishing House of the Romanian Academy in 1989 It grew out of lecture notes for a graduate course given by the author at the University of Iași and was initially intended for students and readers primarily interested in applications of optimal control of ordinary differential equations In this vision the book had to contain an elementary description of the Pontryagin maximum principle and a large number of examples and applications from various fields of science The evolution of control science in the last decades has shown that its methods and tools are drawn from a large spectrum of mathematical results which go beyond the classical theory of ordinary differential equations and real analyses Mathematical areas such as functional analysis topology partial differential equations and infinite dimensional dynamical systems geometry played and will continue to play an increasing role in the development of the control sciences On the other hand control problems is a rich source of deep mathematical problems Any presentation of control theory which for the sake of accessibility ignores these facts is incomplete and unable to attain its goals This is the reason we considered necessary to widen the initial perspective of the book and to include a rigorous mathematical treatment of optimal control theory of processes governed by ordinary differential equations and some typical problems from theory of distributed parameter systems

Analysis and Optimization of Differential Systems Viorel Barbu, Irena Lasiecka, Dan Tiba, Constantin Varsan, 2013-06-05 Analysis and Optimization of Differential Systems focuses on the qualitative aspects of deterministic and stochastic differential equations Areas covered include Ordinary and partial differential systems Optimal control of deterministic and stochastic evolution equations Control theory of Partial Differential Equations PDEs Optimization methods in PDEs with numerous applications to mechanics and physics Inverse problems Stability theory Abstract optimization problems Calculus of variations Numerical treatment of solutions to differential equations and related optimization problems These research fields are under very active development and the present volume should be of interest to students and researchers working in applied mathematics or in system engineering This volume contains selected contributions presented during the International Working Conference on Analysis and Optimization of Differential Systems which was sponsored by the International Federation for Information Processing IFIP and held in Constanta Romania in September 2002 Among the aims of this conference was the creation of new international contacts and collaborations taking advantage of the new developments in Eastern Europe particularly in Romania The conference benefited from the support of the European Union via the EURROMAT program
