

Mathematical programming formulations and metaheuristics for biological sample transportation problems in healthcare

Mario Benini ^{*} Paolo Detti [†] Garazi Zabalo Manrique de Lara [‡]

Abstract

In this paper, a problem arising from a real-world healthcare application is addressed, dealing with the transportation of biological samples from blood draw centers to a main laboratory. The problem can be modeled as a Vehicle Routing Problem with time-windows and samples lifetime constraints, in which transfers and multiple visits at specific nodes (i.e., the spokes) are allowed to get extra lifetimes of the samples. Mixed Integer Linear Programming formulations and *Hybrid Adaptive Large Neighborhood Search* (H-ALNS) algorithms have been developed for the

Mathematical Methods in Biology J. David Logan, William Wolesensky, 2009-08-17 A one of a kind guide to using deterministic and probabilistic methods for solving problems in the biological sciences Highlighting the growing relevance of quantitative techniques in scientific research Mathematical Methods in Biology provides an accessible presentation of the broad range of important mathematical methods for solving problems in the biological sciences The book reveals the growing connections between mathematics and biology through clear explanations and specific interesting problems from areas such as population dynamics foraging theory and life history theory The authors begin with an introduction and review of mathematical tools that are employed in subsequent chapters including biological modeling calculus differential equations dimensionless variables and descriptive statistics The following chapters examine standard discrete and continuous models using matrix algebra as well as difference and differential equations Finally the book outlines probability statistics and stochastic methods as well as material on bootstrapping and stochastic differential equations which is a unique approach that is not offered in other literature on the topic In order to demonstrate the application of mathematical methods to the biological sciences the authors provide focused examples from the field of theoretical ecology which serve as an accessible context for study while also demonstrating mathematical skills that are applicable to many other areas in the life sciences The book's algorithms are illustrated using MATLAB but can also be replicated using other software packages including R Mathematica and Maple however the text does not require any single computer algebra package Each chapter contains numerous exercises and problems that range in difficulty from the basic to more challenging to assist readers with building their problem solving skills Selected solutions are included at the back of the book and a related Web site features supplemental material for further study Extensively class tested to ensure an easy to follow format Mathematical Methods in Biology is an excellent book for mathematics and biology courses at the upper undergraduate and graduate levels It also serves as a valuable reference for researchers and professionals working in the fields of biology ecology and biomathematics
