Mathematical Visualization Algorithms Applications And Numerics:

Mathematical Visualization H.-C. Hege, K. Polthier, 2013-03-09 Mathematical Visualization is a young new discipline. It offers efficient visualization tools to the classical subjects of mathematics and applies mathematical techniques to problems in computer graphics and scientific visualization. Originally it started in the interdisciplinary area of differential geometry, numerical mathematics and computer graphics. In recent years the methods developed have found important applications. The current volume is the quintessence of an international workshop in September 1997 in Berlin focusing on recent developments in this emerging area. Experts present selected research work on new algorithms for visualization problems, describe the application and experiments in geometry and develop new numerical or computer graphical techniques. **An**

Introduction to Recent Developments in Theory and Numerics for Conservation Laws Dietmar Kröner, Mario

Ohlberger, Christian Rohde, 2012-12-06 The book concerns theoretical and numerical aspects of systems of conservation laws which can be considered as a mathematical model for the flows of inviscid compressible fluids. Five leading specialists in this area give an overview of the recent results which include kinetic methods, non classical shock waves, viscosity and relaxation methods, a posteriori error estimates, numerical schemes of higher order on unstructured grids in 3 D, preconditioning and symmetrization of the Euler and Navier Stokes equations. This book will prove to be very useful for scientists working in mathematics, computational fluid mechanics, aerodynamics and astrophysics as well as for graduate students who want to learn about new developments in this area.

High Performance Computing in Science and Engineering '98 Egon Krause, Willi Jäger, 2012-12-06 The book contains reports about the most significant projects from science and industry that are using the supercomputers of the Federal High Performance Computing Center Stuttgart HLRS. These projects are from different scientific disciplines with a focus on engineering, physics and chemistry. They were carefully selected in a peer review process and are showcases for an innovative combination of state of the art physical modeling, novel algorithms and the use of leading edge parallel computer technology. As HLRS is in close cooperation with industrial companies, special emphasis has been put on the industrial relevance of results and methods.

Symbolic-Numeric Computation Dongming Wang, Li-Hong Zhi, 2007-06-25 The growing demand of speed, accuracy and reliability in scientific and engineering computing has been accelerating the merging of symbolic and numeric computations. These two types of computation coexist in mathematics, yet are separated in traditional research of mathematical computation. This book presents 27 research articles on the integration and interaction of symbolic and numeric computation.

Handbook of Medical Imaging, 2000-10-09 In recent years the remarkable advances in medical imaging instruments have increased their use considerably for diagnostics as well as planning and follow up of treatment.
