*The Matrix Online* Chris McCubbin, 2005 Complete Ability Descriptions Gang Stats Item Descriptions and Recipes Exile Hideout Maps Zone Maps and Descriptions      [Online Multiplayer Games](#) William Sims Bainbridge, 2022-05-31 This lecture introduces fundamental principles of online multiplayer games primarily massively multiplayer online role playing games MMORPGs suitable for students and faculty interested both in designing games and in doing research on them The general focus is human centered computing which includes many human computer interaction issues and emphasizes social computing but also looks at how the design of socio economic interactions extends our traditional notions of computer programming to cover human beings as well as machines In addition it demonstrates a range of social science research methodologies both quantitative and qualitative that could be used by students for term papers or by their professors for publications In addition to drawing upon a rich literature about these games this lecture is based on thousands of hours of first hand research experience inside many classic examples including World of Warcraft The Matrix Online Anarchy Online Tabula Rasa Entropia Universe Dark Age of Camelot Age of Conan Lord of the Rings Online Tale in the Desert EVE Online Star Wars Galaxies Pirates of the Burning Sea and the non game virtual world Second Life Among the topics covered are historical cultural origins of leading games technical constraints that shape the experience rolecoding and social control player personality and motivation relationships with avatars and characters virtual professions and economies social relations inside games and the implications for the external society Table of Contents Introduction Historical Cultural Origins Technical Constraints Rolecoding and Social Control Personality and Motivation Avatars and Characters Virtual Professions and Economies Social Relations Inside Games Implications for External Society      *eGods* William Sims Bainbridge, 2013-04-01 William Bainbridge contends that the worlds of massively multiplayer online roleplaying games provide a new perspective on the human quest one that combines the arts and simulates most aspects of real life The quests in gameworlds also provide meaning for human action in terms of narratives about achieving goals by overcoming obstacles

**The Virtual Future** William Sims Bainbridge, 2011-09-06 The newest communication technologies are profoundly changing the world's politics economies and cultures but the specific implications of online game worlds remain mysterious The Virtual Future employs theories and methods from social science to explore nine very different virtual futures The Matrix Online Tabula Rasa Anarchy Online Entropia Universe Star Trek Online EVE Online Star Wars Galaxies World of Warcraft Burning Crusade and The Chronicles of Riddick Each presents a different picture of how technology and society could evolve in coming centuries but one theme runs through all of them the attempt to escape the Earth and seek new destinies among the stars Four decades after the last trip to the moon a new conception of spaceflight is emerging Rather than rockets shooting humans across vast physical distances to sterile rocks that lack the resources to sustain life perhaps robot space probes and orbiting telescopes will glean information about the universe that humans can then experience inside computer

generated environments much closer to home All nine of these fantastically rich multiplayer masterpieces have shown myriads of people that really radical alternatives to contemporary society could exist and has served as a laboratory for examining the consequences Each is a prototype of new social forms a utopian subculture and a simulation of technologies that have yet to be invented They draw upon several different traditions of science fiction and academic philosophy and they were created in several nations By comparing these nine role playing fantasies we can better consider what kind of world we want to inhabit in the real future

**Online Worlds: Convergence of the Real and the Virtual** William Sims

Bainbridge,2009-12-08 William Sims Bainbridge Virtual worlds are persistent online computer generated environments where people can interact whether for work or play in a manner comparable to the real world The most prominent current example is World of Warcraft Corneliussen and Rettberg 2008 a massively multiplayer online game with 11 million s sscribers Some other virtual worlds notably Second Life Rymaszewski et al 2007 are not games at all but Internet based collaboration contexts in which people can create virtual objects simulated architecture and working groups Although interest in virtual worlds has been growing for at least a dozen years only today it is possible to bring together an international team of highly accomplished authors to examine them with both care and excitement employing a range of theories and methodologies to discover the principles that are making virtual worlds increasingly popular and may in future establish them as a major sector of human centered computing

**Virtual Sociocultural Convergence** William Sims Bainbridge,2016-07-06

This book explores the remarkable sociocultural convergence in multiplayer online games and other virtual worlds through the unification of computer science social science and the humanities The emergence of online media provides not only new methods for collecting social science data but also contexts for developing theory and conducting education in the arts as well as technology Notably role playing games and virtual worlds naturally demonstrate many classical concepts about human behaviour in ways that encourage innovative thinking The inspiration derives from the internationally shared values developed in a fifteen year series of conferences on science and technology convergence The primary methodology is focused on sending avatars representing classical social theorists or schools of thought into online gameworlds that harmonize with or challenge their fundamental ideas including technological determinism urban sociology group formation freedom versus control class stratification linguistic variation functional equivalence across cultures behavioural psychology civilization collapse and ethnic pluralism Researchers and students in the social and behavioural sciences will benefit from the many diverse examples of how both qualitative and quantitative science of culture and society can be performed in online communities of many kinds even as artists and gamers learn styles and skills they may apply in their own work and play
