Mathematical Experience:

The Mathematical Experience Philip J. Davis, Reuben Hersh, 1998 Explores the foundations of mathematics looking at the history and philosophy of the field and includes biographical sketches of people who have made mathematics their life's work

Epistemological Foundations of Mathematical Experience Leslie P. Steffe, 2012-12-06 On the 26th, 27th and 28th of February of 1988 a conference was held on the epistemological foundations of mathematical experience as part of the activities of NSF Grant No MDR 8550463 Child Generated Multiplying and Dividing Algorithms A Teaching Experiment I had just completed work on the book Construction of Arithmetical Meanings and Strategies with Paul Cobb and Ernst von Glasersfeld and felt that substantial progress had been made in understanding the early numerical experiences of the six children who were the subjects of study in that book While the book was in preparation I was also engaged in the teaching experiment on multiplying and dividing algorithms My focus in this teaching experiment was on investigating the mathematical experiences of the involved children and on developing a language through which those experiences might be expressed However prior to immersing myself in the conceptual analysis of the mathematical experiences of the children I felt that it was crucial to critically evaluate the progress that we felt we had made in our earlier work It was toward achieving this goal that I organized the conference When trying to understand the mathematical experiences of a child one can do no better than to interact with the child in a mathematical context guided by the intention to specify the child's current knowledge and the progress the child might make

The Companion Guide to the Mathematical Experience Philip J. Davis, Reuben Hersh, Elena A. Marchisotto, 2011-10-30 The Mathematical Experience Philip J. Davis, Reuben Hersh, Elena Anne Marchisotto, 2002 Winner of the 1983 National Book Award a perfectly marvelous book about the Queen of Sciences from which one will get a real feeling for what mathematicians do and who they are The exposition is clear and full of wit and humor The New Yorker 1983 National Book Award edition Mathematics has been a human activity for thousands of years Yet only a few people from the vast population of users are professional mathematicians who create teach foster and apply it in a variety of situations The authors of this book believe that it should be possible for these professional mathematicians to explain to non professionals what they do what they say they are doing and why the world should support them at it They also believe that mathematics should be taught to non mathematics majors in such a way as to instill an appreciation of the power and beauty of mathematics Many people from around the world have told the authors that they have done precisely that with the first edition and they have encouraged publication of this revised edition complete with exercises for helping students to demonstrate their understanding This edition of the book should find a new generation of general readers and students who would like to know what mathematics is all about It will prove invaluable as a course text for a general mathematics appreciation course one in which the student can combine an appreciation for the esthetics with some satisfying and revealing applications The text is ideal for 1 a GE course for Liberal Arts students 2 a Capstone course for perspective

teachers 3 a writing course for mathematics teachers A wealth of customizable online course materials for the book can be obtained from Elena Anne Marchisotto elena marchisotto csun edu upon request The Mathematical Experience Philip J.
