Kaiser,2012-12-06 Khaled Fazel Stefan Kaiser Digital Microwave Systems German Aerospace Center DLR Bosch Telecom GmbH Institute for Communications Technology D 71522 Backnang Germany D 82234 Wessling Germany In this last decade of this millennium the technique of multi carrier transmission for wireless broadband multimedia applications has been receiving wide interests Its first great success was in 1990 as it was selected in the European Digital Audio Broadcasting DAB standard Its further prominent successes were in 1995 and 1998 as it was selected as modulation scheme in the European Digital Video Broadcasting DVB T and in three broadband wireless indoor standards namely ETSI Hiperlan II American IEEE 802 11 and Japanese MMAC respectively The benefits and success of multi carrier MC modulation in one side and the flexibility offered by spread spectrum SS technique in other hand motivated many researchers to investigate the combination of both techniques known as multi carrier spread spectrum MC SS This combination benefits from the main advantages of both systems and offers high flexibility high spectral efficiency simple detection strategies narrow band interference rejection capability etc The basic principle of this combination is straightforward The spreading is performed as direct SS DS SS but instead of transmitting the chips over a single sequence carrier several sub carriers could be employed As depicted in Figure 1 after spreading with assigned user specific code of processing gain G the frequency mapping and multi carrier modulation is applied In the receiver side after multi carrier demodulation and frequency de mapping the corresponding detection algorithm will be performed

**Special Issue on Multi-carrier Spread-spectrum and Related Topics ,2002 Multi-Carrier and Spread Spectrum Systems K. Fazel,S. Kaiser,2004-02-06** Frequency spectrum is a limited and valuable resource for wireless communications A good example can be observed among network operators in Europe for the prices to pay for UMTS frequency bands Therefore the first goal when designing future wireless communication systems e g 4G fourth generation has to be the increase in spectral efficiency The development in digital communications in the past years has enabled efficient modulation and coding techniques for robust and spectral efficient data speech audio and video transmission These are the multi carrier modulation e g OFDM and the spread spectrum technique e g DS CDMA where OFDM was chosen for broadcast applications DVB DAB as well as for broadband wireless indoor standards ETSI HIPERLAN II IEEE 802 11 and the DS CDMA was selected in mobile communications IS 95 third generation mobile radio systems world wide UMTS IMT 2000 Since 1993 various combinations of multi carrier MC modulation and the spread spectrum SS technique have been introduced and the field of MC SS communications has become an independent and important research topic with increasing activities New application fields have been proposed such as high rate cellular mobile high rate wireless indoor and LMDS It has been shown that MC SS offers the high spectral efficiency robustness and flexibility that is required for the next generation systems Meanwhile

different alternative hybrid schemes such as OFDM OFDMA MC TDMA etc have been deeply analysed and adopted in different international standards ETSI BRAN IEEE 802 MMAC Multi Carrier Spread Spectrum Analysis of Hybrid Air Interfaces draws together all of the above mentioned hybrid schemes therefore providing a greatly needed resource for system engineers telecommunication designers and researchers in order to enable them to develop build and deploy several schemes based on MC transmission for the next generation systems which will be an integration of broadband multimedia services covering both 4G mobile and fixed wireless systems Offers a complete treatment of multi carrier spread spectrum SS and time division multiplexing TDM techniques Provides an in depth insight into hybrid multiple access techniques based on multi carrier MC transmission Presents numerous hybrid multiple access and air interface architectures including OFDM CDMA MC CDMA MC DS CDMA and MT CDMA Covers new techniques such as space time coding and software radio Telecommunications engineers hardware software system designers and researchers as well as students lecturers and technicians will all find this an invaluable addition to their bookshelf *Multi-Carrier and Spread Spectrum Systems* Khaled Fazel,Stefan Kaiser,2008-09-15 The technological progress in multi carrier MC modulation led orthogonal frequency division multiplexing OFDM to become an important part of beyond 3G cellular mobile communication standards including LTE and WiMAX In addition the flexibility offered by the spread spectrum SS and time division multiplexing TDM techniques motivated many researchers to investigate several MC combined multiple access schemes such as MC CDMA OFDMA and MC TDMA These schemes benefit from the advantages of each sub system and offer high flexibility high spectral efficiency simple detection strategies and narrow band interference rejection capability Multi Carrier and Spread Spectrum Systems is one of the first books to describe and analyze the basic concepts of multi carrier OFDM transmission and its combination with spread spectrum MC CDMA The different architectures and detection strategies as well as baseband related transceiver components are explained This includes topics like FEC channel coding and decoding modulation and demodulation IFFT FFT digital I Q generation time and frequency synchronisation channel estimation frequency domain equalization and RF aspects such as phase noise and non linearity issues Concrete examples of its applications for cellular mobile communication systems B3G 4G are given Further derivatives of MC SS such as OFDMA SS MC MA and DFT spread OFDM and their corresponding applications in the LTE WiMAX WLAN and DVB RCT standards are detailed Capacity and flexibility enhancements of multi carrier OFDM systems by different MIMO diversity techniques such as space time frequency coding STC SFC and software defined radio concepts are also described Written in a highly accessible manner this book provides a unique reference on the topics of multi carrier and spread spectrum communications assisting 4G engineers with their implementation Fully updated new edition of successful text including two new chapters on LTE and WiMAX Describes in detail new applications of OFDM in mobile communication standards Examines all multi carrier spread spectrum schemes with in depth analysis from theory to practice Introduces the essentials of important wireless standards based on multi
