The Power of Compromise Kai-Simon Goetzmann,2013

Multicriteria Optimization Matthias Ehrgott,2006-01-16

Decision makers in many areas from industry to engineering and the social sector face an increasing need to consider multiple conflicting objectives in their decision processes In many cases these real world decision problems can be formulated as multicriteria mathematical optimization models The solution of such models requires appropriate techniques to compute so called efficient or Pareto optimal or compromise solutions that unlike traditional mathematical programming methods take the contradictory nature of the criteria into account This book provides the necessary mathematical foundation of multicriteria optimization to solve nonlinear linear and combinatorial problems with multiple criteria Motivational examples illustrate the use of multicriteria optimization in practice Numerous illustrations and exercises as well as an extensive bibliography are provided In the new edition a chapter on optimality conditions has been added The linear programming part has been extended and includes new developments Moreover motivational examples are now introducing the majority of chapters

Multicriteria Optimization Nodari Vakhania,Frank Werner,2020

Multicriteria Optimization in Engineering and in the Sciences Wolfram Stadler,1988-03-31 We are rarely asked to make decisions based on only one criterion most often decisions are based on several usually conflicting criteria In nature if the design of a system evolves to some final optimal state then it must include a balance for the interaction of the system with its surroundings certainly a design based on a variety of criteria Furthermore the diversity of nature's designs suggests an infinity of such optimal states In another sense decisions simultaneously optimize a finite number of criteria while there is usually an infinity of optimal solutions Multicriteria optimization provides the mathematical framework to accommodate these demands Multicriteria optimization has its roots in mathematical economics in particular in consumer economics as considered by Edgeworth and Pareto The critical question in an exchange economy concerns the equilibrium point at which each of N consumers has achieved the best possible deal for himself or herself Ultimately this is a collective decision in which any further gain by one consumer can occur only at the expense of at least one other consumer Such an equilibrium concept was first introduced by Edgeworth in 1881 in his book on mathematical psychics Today such an optimum is variously called Pareto optimum after the Italian French welfare economist who continued and expanded Edgeworth's work efficient nondominated and so on

Data Mining, Rough Sets and Granular Computing Tsau Young Lin,Yiyu

Y. Yao, Lotfi A. Zadeh, 2002-04-10 During the past few years data mining has grown rapidly in visibility and importance within information processing and decision analysis. This is particularly true in the realm of e-commerce where data mining is moving from a nice to have to a must have status. In a different though related context a new computing methodology called granular computing is emerging as a powerful tool for the conception, analysis and design of information intelligent systems. In essence data mining deals with summarization of information which is resident in large data sets while granular computing plays a key role in the summarization process by drawing together points/objects which are related through similarity, proximity or functionality. In this perspective granular computing has a position of centrality in data mining. Another methodology which has high relevance to data mining and plays a central role in this volume is that of rough set theory. Basically rough set theory may be viewed as a branch of granular computing. However its applications to data mining have predated that of granular computing.

Decision-Making Models and Applications in Manufacturing Environments

Pushpdant Jain, Kumar Abhishek, Prasenjit Chatterjee, 2024-02-20 Multi criteria decision making (MCDM) has gained vast popularity for its ability to help make decisions in the presence of various similar and conflicting choices. This new volume applies the MCDM theory to solving problems and challenges in manufacturing environments. It discusses using MCDM computational methods to evaluate and select the most optimal solution or method for real world real time manufacturing engineering issues. It details the decision making process in relation to materials selection, identification, assessment and evaluation of risk, sustainability assessment, selection of green suppliers and more. The chapter authors demonstrate the application of myriad MCDM techniques in decision making including MADM (multiple attribute decision making), DEA (data envelopment analysis), fuzzy TOPSIS technique for order preference by similarities to ideal solution, fuzzy VIKOR multicriteria optimization and compromise solution, MOORA (multi objective optimization on the basis of ratio analysis), EWM (entropy weight method), AHP (analytic hierarchy process), TODIM (Tomada de Decisao Interativa Multicriterio) and others. The volume illustrates these MCDM models in several industries and industrial processes including for experimental analysis and optimization of drilling of glass fiber reinforced plastic in the textile industries, for selection of refrigerants for domestic applications and others.

Multicriteria Optimization & Design Statnikov, 1997-06-30

Evolutionary Algorithms for Single and Multicriteria Design Optimization Andrzej Osyczka, 2002 Many design optimization problems are of a very complex nature and quite hard to solve by conventional optimization techniques. Genetic and evolutionary algorithms have recently received considerable attention because of their potential of being a very effective design optimization technique. The book starts with an introduction to design optimization which is followed by a description of genetic and evolutionary algorithms. Then the advanced evolutionary algorithm techniques are provided. These techniques are used in the single and multicriteria optimization methods described in this book. Finally three real life design optimization problems are formulated and solved by means of these methods. The book is designed as a self study guide for researchers and students in all

engineering departments especially in mechanical civil and industrial engineering The book may also be useful as a comprehensive text for operations researchers artificial intelligence researchers **Multicriteria Optimization**

Springer,2014-01-15 **Multiple Criteria Optimization** Xavier Gandibleux,2006-04-11 The generalized area of multiple criteria decision making MCDM can be defined as the body of methods and procedures by which the concern for multiple conflicting criteria can be formally incorporated into the analytical process MCDM consists mostly of two branches multiple criteria optimization and multi criteria decision analysis MCDA While MCDA is typically concerned with multiple criteria problems that have a small number of alternatives often in an environment of uncertainty location of an airport type of drug rehabilitation program multiple criteria optimization is typically directed at problems formulated within a mathematical programming framework but with a stack of objectives instead of just one river basin management engineering component design product distribution It is about the most modern treatment of multiple criteria optimization that this book is concerned I look at this book as a nicely organized and well rounded presentation of what I view as new wave topics in multiple criteria optimization Looking back to the origins of MCDM most people agree that it was not until about the early 1970s that multiple criteria optimization became a field At this time and for about the following fifteen years the focus was on theories of multiple objective linear programming that subsume conventional single criterion linear programming algorithms for characterizing the efficient set theoretical vector maximum developments and interactive procedures

Multiple Criteria Optimization Ralph E. Steuer,1986 This text on operations research statistics is designed for junior and senior graduate courses in multiple criteria decision making multiple criteria optimization and multiple objective programming The book shows how to implement the techniques of multiple criteria optimization for solving large scale multiple objective problems on a computer It contains full details on such recent breakthrough developments as the Tchebycheff method a method that enables one to solve large scale multiple objective linear integer and nonlinear programming problems Included are numerous exercises for solving problems manually and by using a computer

Techniques in Waste Management Suchismita Satapathy,Debesh Mishra,Prasenjit Chatterjee,2021-09-30 This book addresses the problem of waste management by using multi criteria decision making MCDM methods The authors discuss how to apply MCDM a complex decision making tool that involves both quantitative and qualitative factors to develop strategies for effective waste management using various optimization models to rank alternatives while also incorporating the concerns and needs of multiple stakeholders to find the most optimal decisions for various types of wastes Typically there does not exist a single optimal solution to waste problems with help of MCDM far better solutions can often be found and utilized to facilitate sustainable waste management techniques in various industries This book provides unique effective and quick decision making strategies for waste management With the ever increasing population and continuing human development the problem of managing waste becomes increasingly essential and this volume helps lead the way to finding sustainable solutions *The International Journal, Advanced Manufacturing Technology* ,1990
