Multicriteria Scheduling:

Multicriteria Scheduling Vincent T'Kindt, Jean-Charles Billaut, 2006-03-20 Scheduling and multicriteria optimisation theory have been subject separately to numerous studies Since the last twenty years multicriteria scheduling problems have been subject to a growing interest However a gap between multicriteria scheduling approaches and multicriteria optimisation field exists This book is an attempt to collect the elementary of multicriteria optimisation theory and the basic models and algorithms of multicriteria scheduling It is composed of numerous illustrations algorithms and examples which may help the reader in understanding the presented concepts This book covers general concepts such as Pareto optimality complexity theory and general method for multicriteria optimisation as well as dedicated scheduling problems and algorithms just in time scheduling flexibility and robustness single machine problems parallel machine problems shop problems etc The second edition contains revisions and new material

Multiple Criteria Optimization Xavier Gandibleux, 2006-04-11 The generalized area of multiple criteria decision making MCDM can be defined as the body of methods and procedures by which the concern for multiple conflicting criteria can be formally incorporated into the analytical process MCDM consists mostly of two branches multiple criteria optimization and multi criteria decision analysis MCDA While MCDA is typically concerned with multiple criteria problems that have a small number of alternatives often in an environment of uncertainty location of an airport type of drug rehabilitation program multiple criteria optimization is typically directed at problems formulated within a mathematical programming framework but with a stack of objectives instead of just one river basin management engineering component design product distribution It is about the most modern treatment of multiple criteria optimization that this book is concerned I look at this book as a nicely organized and well rounded presentation of what I view as new wave topics in multiple criteria optimization Looking back to the origins of MCDM most people agree that it was not until about the early 1970s that multiple criteria optimization coalesced as a field At this time and for about the following fifteen years the focus was on theories of multiple objective linear programming that subsume conventional single criterion linear programming algorithms for characterizing the efficient set theoretical vector maximum developments and interactive procedures
