Agricultural Multifunctionality and Care Farming Paul Custance, Keith Walley, Gaynor Tate, Goksel Armagan, 2015 The purpose of the case is to provide insight into care farming and the role that it may play in agricultural multifunctionality The paper outlines three case studies of care farming in the UK to compare and contrast the roles that such organizations may play in multifunctional agriculture Although the work has the obvious limitation of being based on case study care farms that are based in the UK the findings are sufficiently generic to serve as valuable learning material for those interested in the subject and located anywhere in the world The main finding from this

study is that care farming can take many different forms but still contribute to agricultural multifunctionality. The study also confirms the important roles that economic support and favourable legislation play in successful care farming. The paper concludes that care farming is a legitimate form of agricultural multifunctionality but reminds those interested in setting up or promoting care farms of the need for a supportive economic and legislative environment. The paper provides contemporary insight into the concept of care farming as a form of agricultural multifunctionality. A number of generic points are made that should be of value to an international audience of academics researching in this area as well as students studying care farming and agricultural multifunctionality, farmers considering diversifying into care farming and politicians working to create a political and economic environment that may support care farms.

*Multifunctionality: The Policy Implications* OECD, 2003-09-18. This report attempts to guide policy makers to the best possible decisions taking account of the multifunctional character of agriculture. Policy makers and analysts are supplied with a series of detailed questions which will help determine whether Multifunctional Agriculture Guido van Huylenbroeck, Guy Durand, 2003. Throughout history agriculture has played an essential role in the development of rural areas. Thus despite the fact that over the past few decades its role as an economic activity has been severely depleted it continues to be of great importance for rural development although its role must be radically reformulated. While agriculture is no longer the main source of employment in rural areas farmers are looking to diversify from their traditional role as food producers by also providing non commodity goods to society such as landscape, nature, employment, rural viability, animal welfare and so on. Public support is increasingly more oriented towards farms which are taking on this multifunctional role. This causes an important change in farm systems and practices requiring a broadening into new activities, an improvement in quality or value for money or a regrouping for example addressing environmental concerns. To cope with such reorientation farmers require the assistance of extension officers, sociologists and economists. This book brings together such experts to investigate what this reorientation of agriculture means in practice, how it responds to the needs of society, how it can be implemented through legislation and public policies and how far this gives new opportunities for non competitive or even marginal farms.

**Multifunctionality: The Policy Implications** OECD, 2003-09-02. Building on the path breaking work *Multifunctionality: Towards an Analytical Framework* this report takes the subject a step further. It attempts to guide policy makers to the best possible decisions taking account of the multifunctional character of agriculture. Multifunctional Agriculture Roger Leakey, 2017-04-14. In a world increasingly challenged by the need to integrate and understand highly specialized knowledge in a multidisciplinary way this book is innovative and perhaps unique in addressing this challenge. It focuses on ideas, strategies, techniques and practices spanning many disciplines at the interface of agriculture with forestry, horticulture, plant physiology, genetics, ecology, soil science, food science, economics and the social and environmental sciences as delivered by intensified and enriched agroforestry. *Multifunctional Agriculture* addresses this complexity using case studies and insights from the needs of

African farmers whose livelihoods are constrained by complex interactions between social environmental and economic factors and problems underlying agricultural sustainability in Africa This book therefore provides an important resource for those trying to understand the role of agriculture in the achievement of the new Sustainable Development Goals by providing easily implementable practical and effective methodologies and practices Provides a single source comprehensive insight into agroforestry multifunctional agriculture it s potential challenges and progress Helps readers understand and assess potential opportunity through implementation Includes case studies and real world insights that address common situations and the practical application of best practices Explores the role of multi functional agriculture in mitigating climate change impacts providing value story beyond crop production

**Multifunctional Agriculture** Guido Van Huylenbroeck,2017 This title was first published in 2003 Reading the European Commission s statement on the future of agriculture indicates the importance of multifunctionality to European Agriculture as a matter of principle This title investigates what such a reorientation would mean in practical terms Provided by publisher

**Multifunctional Agriculture** Geoff Wilson,2007

**Multifunctional Rural Land Management** Floor Brouwer,2012 The increasing demand for rural land and its natural resources is creating competition and conflicts Many interested parties including farmers nature conservationists rural residents and tourists compete for the same space Especially in densely populated areas agriculture recreation urban and suburban growth and infrastructure development exert a constant pressure on rural areas Because land is a finite resource spatial policies which are formulated and implemented to increase the area allocated to one use imply a decrease in land available for other uses As a result at many locations multi purpose land use is becoming increasingly important This notion of multi purpose land use is reflected in the term multifunctionality This volume provides insights into viable strategies of sustainable management practices allowing multiple functions sustained by agriculture and natural resources in rural areas It shows how the rural economy and policies can balance and cope with these competing demands and includes numerous case studies from Europe North America and developing countries
