Multimodal Discourse Analysis:

Discourse and Technology Philip LeVine, Ron Scollon, 2004-02-16 The overarching theme of Discourse and Technology is cutting edge in the field of linguistics multimodal discourse. This volume opens up a discussion among discourse analysts and others in linguistics and related fields about the two fold impact of new communication technologies. The impact on how discourse data is collected transcribed and analyzed and the impact that these technologies are having on social interaction and discourse. As inexpensive tape recorders allowed the field to move beyond text written or printed language to capture talk discourse as spoken language the information explosion including cell phones video recorders Internet chat rooms online journals and the like has moved those in the field to recognize that all discourse is in various ways multimodal constructed through speech and gesture as well as through typography layout and the materials employed in the making of texts. The contributors have responded to the expanding scope of discourse analysis by asking five key questions Why should we study discourse and technology and multimodal discourse analysis? What is the role of the World Wide Web in discourse analysis? How does one analyze multimodal discourse in studies of social actions and interactions? How does one analyze multimodal discourse in educational social interactions and How does one use multimodal discourse analyses in the workplace? The vitality of these explorations opens windows onto even newer horizons of discourse and discourse analysis

Introduction

to Multimodal Analysis David Machin, 2016-09-22 Introduction to Multimodal Analysis is a unique and accessible textbook that clearly and critically explains this groundbreaking approach to visual analysis. Each chapter outlines the tools for analysis and takes the reader through examples of analysis providing a model that can then be followed. All visual media compositions such as photographs advertisements newspapers and websites are carefully designed. A photograph of a soldier an advertisement for a car a magazine cover or the opening titles to a news programme are thought out to create the appropriate effect. Designers use semiotic tools such as colour framing focus positioning of elements and font style to communicate with the viewer. These choices make up a visual language that we can analyse. Multimodal analysis looks at the separate components of this language to build up a toolkit for analysing the grammar of visual design. The book includes an assessment of the claim that there is a visual grammar and important differences between images and language and the way they create meaning are identified. Including images throughout and a colour plate section.
