Four      **Chemical Sensitivity** Stephen J. Barrett, Ronald Gots, 2010-12-31 Chemical sensitivity or multiple chemical sensitivity describes people with numerous troubling symptoms attributed to environmental factors from simple housepaint to complex building structures and materials in offices and schools. Many such people are seeking special accommodations applying for disability benefits and filing lawsuits claiming that exposure to common foods and chemicals has made them ill. Their efforts are supported by some physicians who refer themselves as clinical ecologists. They use questionable diagnoses and treatment methods while critics charge that these approaches are bogus and that chemical sensitivity is not a valid diagnosis. The complaints associated with chemical sensitivity include depression, irritability, poor memory, fatigue, drowsiness, constipation, sneezing, wheezing, skin rashes, headache, chest pain, pounding heart, swelling, upset stomach, paralysis, AIDS-like illnesses, psychotic experiences, and just about every other symptom noted in medical textbooks. One prominent clinical ecologist even claimed that chemical sensitivity patients may well be human canaries on an increasingly poisoned planet and others have actually labeled chemical sensitivity as a disease. While some people are adversely affected by exposure to some chemicals there is an overwhelming increase in false claims and reports from misled obsessive patients and opportunistic doctors. Chemical Sensitivity examines this phenomenon in depth and the scientific, legal, ethical, and political issues that surround it. The authors explore the speculations about environmental exposure in the light of scientific knowledge of human physiology, allergy, and immunology, pathology, toxicology, and clinical medicine. They evaluate cases of chemical sensitivity relative to controlled tests and reveal that symptoms were brought on by psychological factors rather than physical ones. Chemical Sensitivity also critically assesses claims related to sick building syndrome, mercury, amalgam, toxicity, yeast allergy, and Gulf War syndrome.

**Chemical and Electrical Hypersensitivity** Jerry Evans, 2014-01-10 Electrical and multiple chemical sensitivities are disabling illnesses yet many doctors know little of these conditions or worse dismiss them. This timely memoir recounts one man's affliction. The onset of the diseases is explored as is his struggle with the medical establishment largely hostile to his diagnosis. When the symptoms became unbearable he was forced to leave home and seek a more healthful environment where he could begin his recovery. This is an inspirational text for those living with electrical or multiple chemical sensitivity and an educational one for those first learning about these conditions.

[Living with Environmental Illness](#) Stephen Edelson, Jan Berliner Statman, 1998 People who have Multiple Chemical Sensitivity (MCS) are often disbelieved and misdiagnosed. The interaction of low level chemicals that are constantly present in our environment cause sufferers of MCS to develop symptoms such as fatigue, depression, headaches, sore throats, asthma, chest pains, and circulation problems. In *Living With Environmental Illness* the authors discuss how the growing numbers of chemicals we're exposed to daily have contributed to the sharp rise of environmental illnesses in recent years. They provide a checklist for determining whether you may be suffering from MCS, describe the ten developmental stages of the disease, tell how to determine who is most at risk for developing symptoms, and detail lifestyle changes that should be made for living with
