**Multiple Myeloma** Paul G. Richardson, Kenneth C. Anderson, 2004

Multiple myeloma is the second most common hematologic malignancy affecting 15 000 patients per year in the United States. Despite the advent of high dose chemotherapy with stem cell transplantation multiple myeloma remains incurable with approximately 12 000 deaths per annum recorded in the US from the disease. Over the last 10 years there has been a dramatic increase in our understanding of the biology of multiple myeloma which has provided insights into mechanisms of cytotoxic resistance both as inherent characteristics of the myeloma cell and the protective interaction between the tumor and its bone marrow microenvironment. Moreover advances in our understanding of multiple myeloma pathogenesis have helped further define the intricacies of this complex disease. This book provides a concise overview of the state of the art in multiple myeloma and should be of primary interest to clinicians as well as scientists and related caregivers alike in this rapidly changing field.

**Multiple Myeloma, An Issue of Hematology/Oncology Clinics** Kenneth C. Anderson, 2014-11-22

Articles in this issue include Monoclonal Gammopathy of Undetermined Significance and Smoldering Multiple Myeloma Diagnosis and Risk Stratification in Myeloma Treatment of Newly Diagnosed Transplant Eligible Patients Treatment of Newly Diagnosed Transplant Ineligible Patients Treatment of Relapsed Refractory Myeloma Maintenance Therapy Novel Targeted Therapies Novel Immune based Therapies Allotransplantation in Myeloma and Waldenstrom's Macroglobulinemia.

Multiple Myeloma Shaji Kumar, 2010-08-24 Multiple Myeloma The second issue of Emerging Cancer Therapeutics focuses on multiple myelomas also known as plasma cell myeloma, Kahler's Disease and myelomatosis. It is estimated that over 20 000 new cases are diagnosed each year with over 10 000 people dying from these malignancies. Multiple myelomas are highly treatable but rarely curable. Thus it is crucial for the practitioner to be up to date on the latest insights regarding their management. Management options and outcomes for individuals with multiple myelomas improved dramatically with the introduction of chemotherapy. Even further improvements in prognosis have occurred because of the introduction of newer therapies such as pulse corticosteroids, thalidomide, bortezomib and autologous and allogeneic stem cell transplantation. With the increased number of therapeutic options to choose from the clinician is better placed to offer effective therapy but at the same time is challenged to keep abreast of the rapidly changing treatment landscape and the newly emerging data that is shaping the treatment options today and in the future. Multiple Myeloma provides a comprehensive and in depth review of this group of malignancies. This volume reviews the current literature, provides critical evaluations of the data and offers evidence based recommendations. About the Series Emerging Cancer Therapeutics is an invited review publication providing a thorough analysis of key clinical research related to cancer therapeutics including a discussion and assessment of current evidence, current clinical best practice and likely near future developments. There is an emphasis throughout on multidisciplinary approaches to the specialty as well as on quality and outcomes analysis. Published three times a year.

Emerging Cancer Therapeutics provides authoritative thorough assessments of advances in therapeutics in all major areas of oncology both solid and hematologic malignancies with a focus on advances in medical and biological therapies with emerging clinical impact and encompassing new technologies with implications for management such as molecular imaging Features of Emerging Cancer Therapeutics include Editorial board of nationally recognized experts across the spectrum of Cancer Therapeutics In depth up to date expert reviews and analysis of major new developments in all areas of Cancer Therapeutics Issues edited by an authority in specific subject area Focuses on major topics in Cancer Therapeutics with in depth articles covering advances in clinical and translational research developments as well as clinical applications and experience Emphasizes multidisciplinary approaches to research and practice
