Multiple Risk Factors In Cardiovascular Diseases

Michael L. Pollock

Multiple Risk Factors In Cardiovascular Diseases:

Multiple Risk Factors in Cardiovascular Disease Giovanni Lorenzini Foundation (Milan), International Symposium on Multiple Risk Factors in Cardiovascular Disease, 1998 The issue of interaction of risk factors in cardiovascular disease is timely and of clinical relevance This book is a collection of the scientific contributions to the 4th International Symposium on Multiple Risk Factors and Cardiovascular Disease Strategies of Prevention of Coronary Heart Disease Cardiac Failure and Stroke and addresses the role of simultaneous risk factors in patients Because patients with two or more risk factors are at very high risk for developing cardiovascular diseases special care should be taken in the choice of appropriate therapeutic intervention Risk factors are also discussed from the point of view of the biochemist and the pharmacologist by addressing the mechanisms underlying the onset of hypertension hyperlipoproteinemia hypercoagulability and the possibility of therapeutic intervention This book will therefore be of value to the biochemist pharmacologist and clinical pharmacologist as well as to specialists in the field of cardiovascular medicine in order to keep up to date with current knowledge in this fast moving field of research

Multiple Risk Factors in Cardiovascular Disease Antonio M. Gotto Jr, Claude Lenfant, Rodolfo Paoletti, 2014-01-15 Multiple Risk Factors in Cardiovascular Disease Antonio M. Gotto Jr., Claude Lenfant, Rodolfo Paoletti, 2013-06-29 This book includes the most significant contributions of the First International Symposium on Multiple risk factors in cardiovascular disease chaired by Professors A V Chobanian Boston A M Gotto Jr Houston c Lenfant Bethesda R Paoletti and A Zanchetti Milan held in Washington DC 10 12 December 1990 which focused on the risk factors for cardiovascular disease and their interactions The need for this symposium is based on the epidemiological evidence that individuals from industrialized countries often possess two or more risk factors which synergically increase the global risk profile The evidence that isolated vascular risk factors are not commonly found in high risk patients but more often a combination of risk factors are detected is highlighted Many recent epidemiological data identifying the intrinsic and environmental factors contributing to the development of atherosclerosis are discussed These results in parallel to basic and clinical research underline how atherosclerosis is a complex and multifactorial process involving the influences of lipid deposition blood pressure rheologic forces carbohydrate tolerance and thrombogenic factors fibrinogen and platelets Atherosclerosis is markedly accelerated by other risk factors more so in the presence of concomitant hypercholesterolemia hypertension diabetes upper body obesity Furthermore the risk associated with any one of these risk factors varies widely depending on level of the associated atherogenic risk factors Multiple Risk Factors in Cardiovascular Disease Antonio M. Gotto, 1995 Patients with two or more risk factors have a very high risk of developing cardiovascular disease It follows that the strategy for the intervention of multiple risk factors is in fact of paramount relevance in detecting patients at high risk of cardiovascular disease requiring therapeutic intervention The text also discusses risk factors from the point of view of biochemists and pharmacologists by addressing the mechanisms underlying the onset of hypertension hyperlipoproteinaemia

hypercoagulability and the possibility of therapeutic intervention *Global Burden of Disease and Risk Factors* Alan D. Lopez, 2006-04-02 Strategic health planning the cornerstone of initiatives designed to achieve health improvement goals around the world requires an understanding of the comparative burden of diseases and injuries their corresponding risk factors and the likely effects of intervention options The Global Burden of Disease framework originally published in 1990 has been widely adopted as the preferred method for health accounting and has become the standard to guide the setting of health research priorities This publication sets out an updated assessment of the situation with an analysis of trends observed since 1990 and a chapter on the sensitivity of GBD estimates to various sources of uncertainty in methods and data
