Multiple Sclerosis Chris H. Polman, 2010-03 Multiple Sclerosis International Federation Cover *Multiple Sclerosis* Gary L. Birnbaum, 2013-04-01 Multiple Sclerosis MS is an inflammatory often progressive and potentially disabling disease of the central nervous system Onset of disease is usually between the ages of 15 and 50 with the incidence nearly twice as high in women While the cause of MS is still unknown the predominant theory is that it is an autoimmune disease triggered by an unknown environmental factor that results in both loss of central nervous system myelin and degeneration of axons and neurons Although there have been a number of publications addressing different aspects of MS treatment in the neurological literature there is a dearth of material on MS designed for internists and primary care physicians who are often the first to see patients presenting with symptoms of MS Therefore this concise clinically focused volume will serve as a valuable

resource tailored to the specific needs of internists and primary care physicians Part of the Oxford Neurology Library this highly practical pocketbook covers current approaches and new developments in the diagnosis treatment and management of MS including both early and advanced stages of the disease The book offers in depth coverage of special populations as well as the more unusual manifestations of MS which are less familiar to the internal medicine audience It will also address the role of imaging studies in the diagnosis differential diagnosis and monitoring of the progression of MS In addition to providing up to date information on pharmacological therapies for MS the book also describes an array of non pharmacological treatment options

Neurological Disorders World Health Organization,2006 Although there are several gaps in understanding the many issues related to neurological disorders we know enough to be able to shape effective policy responses to some of the most common This book describes and discusses the increasing public health impact of common neurological disorders such as dementia epilepsy headache disorders multiple sclerosis neuroinfections neurological disorders associated with malnutrition pain associated with neurological disorders Parkinson s disease stroke and traumatic brain injuries It provides information and advice on public health interventions that

may reduce their occurrence and consequences and offers health professionals and planners the opportunity to assess the burden caused by these disorders. The clear message that emerges is that unless immediate action is taken globally the neurological burden is likely to become an increasingly serious and unmanageable.
