## **Multiplicative Homology Operations And Transfer:**

Multiplicative Homology Operations and Transfer Norihiko Minami, 1991 The purpose of this paper is to present a totally new approach to homology operations on italic capitals  $QS0$  including their foundations and some applications One strategy is to deduce relations among the various operations as consequences of similar relations among various operations on Burnside rings

**Equivariant Maps, the General  $S^1$ -Action** Jorge Ize, Ivar Massabo, Alfonso Vignoli, 1992 In this paper we consider general italic  $S1$  actions which may differ on the domain and on the range with isotropy subspaces with one dimension more on the domain In the special case of self maps the italic  $S1$  degree is given by the usual degree of the invariant part while for one parameter italic  $S1$  maps one has an integer for each isotropy subgroup different from italic  $S1$  In particular we recover all the italic  $S1$  degrees introduced in special cases by other authors and we are also able to interpret period doubling results on the basis of our italic  $S1$  degree The applications concern essentially periodic solutions of ordinary differential equations

Orientation and the Leray-Schauder Theory for Fully Nonlinear Elliptic Boundary Value Problems Patrick Fitzpatrick, Jacobo Pejsachowicz, 1993-01-01 The aim of this work is to develop an additive integer valued degree theory for the class of quasilinear Fredholm mappings This class is sufficiently large that within its framework one can study general fully nonlinear elliptic boundary value problems A degree for the whole class of quasilinear Fredholm mappings must necessarily accommodate sign switching of the degree along admissible homotopies The authors introduce parity a homotopy invariant of paths of linear Fredholm operators having invertible endpoints The parity provides a complete description of the possible changes in sign of the degree and thereby permits use of the degree to prove multiplicity and bifurcation theorems for quasilinear Fredholm mappings Applications are given to the study of fully nonlinear elliptic boundary value problems

Brownian Motion on Nested Fractals Tom Lindstrøm, 1990 Lindstrom U of Oslo constructs Brownian motion on a reasonably general class of self similar fractals He deals with diffusions self similar fractals fractal Laplacians asymptotic distribution of eigenvalues nonstandard analysis Annotation copyright Book News Inc Portland Or

Imbeddings of Three-Manifold Groups Francisco González-Acuña, Wilbur Carrington Whitten, 1992 This paper deals with the two broad questions of how 3 manifold groups imbed in one another and how such imbeddings relate to any corresponding lowercase Greek  $\Pi_1$  injective maps In particular we are interested in 1 determining which 3 manifold groups are no cohompian that is which 3 manifold groups imbed properly in themselves 2 determining the knot subgroups of a knot group and 3 determining when surgery on a knot italic  $K$  yields a lens or lens like space and the relationship of such a surgery to the knot subgroup structure of lowercase Greek  $\Pi_1$  italic  $S3$  italic  $K$  Our work requires the formulation of a deformation theorem for lowercase Greek  $\Pi_1$  injective maps between certain kinds of Haken manifolds and the development of some algebraic tools

Weak Type Estimates for Cesaro Sums of Jacobi Polynomial Series Sagun Chanillo, Benjamin Muckenhoupt, 1993 This work

completely characterizes the behaviour of Cesaro means of any order of the Jacobi polynomials In particular pointwise estimates are derived for the Cesaro mean kernel Complete answers are given for the convergence almost everywhere of partial sums of Cesaro means of functions belonging to the critical  $L^p$  spaces This characterization is deduced from weak type estimates for the maximal partial sum operator The methods used are fairly general and should apply to other series of special functions

**Chapter 16 of Ramanujan's Second Notebook: Theta-Functions and  $q$ -Series** Chandrashekhar Adiga, 1985 The first part of Chapter 16 in Ramanujan's second notebook is devoted to  $q$  series Several of the results obtained by Ramanujan are classical but many are new In particular certain elegant  $q$  continued fraction expansions have not appeared heretofore in print In the remainder of this chapter Ramanujan develops the theory of the classical theta functions in a manner different from his nineteenth century predecessors such as Jacobi Although many of Ramanujan's discoveries about theta functions are well known several new results are also to be found

**Associated Graded Algebra of a Gorenstein Artin Algebra** Anthony Ayers Iarrobino, 1994 In 1904 Macaulay described the Hilbert function of the intersection of two plane curve branches It is the sum of a sequence of functions of simple form This monograph describes the structure of the tangent cone of the intersection underlying this symmetry Iarrobino generalizes Macaulay's result beyond complete intersections in two variables to Gorenstein Artin algebras in an arbitrary number of variables He shows that the tangent cone of a Gorenstein singularity contains a sequence of ideals whose successive quotients are reflexive modules Applications are given to determining the multiplicity and orders of generators of Gorenstein ideals and to problems of deforming singular mapping germs Also included are a survey of results concerning the Hilbert function of Gorenstein Artin algebras and an extensive bibliography

**Recent Progress in Homotopy Theory** Donald M. Davis, 2002 This volume presents the proceedings from the month long program held at Johns Hopkins University Baltimore MD on homotopy theory sponsored by the Japan U S Mathematics Institute JAMI The book begins with historical accounts on the work of Professors Peter Landweber and Stewart Priddy Central among the other topics are the following 1 classical and nonclassical theory of  $H$  spaces compact groups and finite groups 2 classical and chromatic homotopy theory and localization 3 classical and topological Hochschild cohomology 4 elliptic cohomology and its relation to Moonshine and topological modular forms and 5 motivic cohomology and Chow rings This volume surveys the current state of research in these areas and offers an overview of future directions
