Kenett,1998-04-22 Provides a theoretical foundation as well as practical tools for the analysis of multivariate data using case studies and MINITAB computer macros to illustrate basic and advanced quality control methods This work offers an approach to quality control that relies on statistical tolerance regions and discusses computer graphic analysis highlightin *Multivariate Total Quality Control* Carlo Lauro,Jaromir Antoch,Vincenzo Esposito Vinzi,Gilbert Saporta,2012-12-06 In the last decades the production of goods and the offer of services have become quite complex activities mostly because of the markets globalisation of the continuous push to the innovation and of the constant requests from more and more demanding markets The main objective of a company system has become the achievement of the quality for the business management cycle This cycle goes from the design Plan to the production Do from the control Check to the man agement Action as well as to the marketing and distribution Nowadays the Total Quality of the company system is evaluated according to the ISO 9000 regulations in terms of its capacity to adjust the design and the pro duction to the needs expressed explicitly or implicitly by the final users of a product service In this

process the use of statistical techniques is essential not only in the classical approach of Quality Control of a product but also and most importantly in the Quality Design oriented to the satisfaction of customers Thus Total Quality refers to the global capacity of a company to fit its system to the real needs of its customers by designing products which are able to match the customers taste and by implementing a statistical control of both the product and the Customer Satisfaction In such a process of design and evaluation several statistical variables are involved and with a different nature numerical categorical ordinal
