Encyclopedia of Agriculture and Food Systems Neal K. Van Alfen, 2014-07-29 Encyclopedia of Agriculture and Food

Systems Second Edition Five Volume Set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face. Questions it addresses include: Will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion people expected to inhabit our planet by 2050? Will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today's agriculture practices? Will we be able to produce the additional food using less land and water than we use now? These are among the most important challenges that face our planet in the coming decades. The broad themes of food systems and people, agriculture and the environment, the science of agriculture, agricultural products and agricultural production systems are covered in more than 200 separate chapters of this work. The book provides information that serves as the foundation for discussion of the food and environment challenges of the world. An international group of highly respected authors addresses these issues from a global perspective and provides the background, references and linkages for further exploration of each of topics of this comprehensive work. Addresses important challenges of sustainability and efficiency from a global perspective. Takes a detailed look at the important issues affecting the agricultural and food industries today. Full colour throughout.

**Spectroscopic Methods in Food Analysis** Adriana S. Franca, Leo M.L. Nollet, 2017-12-14. Given the inherent complexity of food products, most instrumental techniques employed for quality and authenticity evaluation, e.g. chromatographic methods, are time demanding, expensive and involve a considerable amount of manual labor. Therefore, there has been an increasing interest in simpler, faster and reliable analytical methods for assessing food quality attributes. **Spectroscopic Methods in Food Analysis** presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis. The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry, causing concern among consumers and special attention among food manufacturers. As such, this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation, provide rapid and on-line analysis and have the potential to run multiple tests on a single sample, i.e. non-destructive. This book consists of concepts related to food quality and authenticity that are quite broad, given the different demands of the manufacturer, the consumer, the surveillance and the legislative bodies that ultimately provide healthy and safe products.
