New Trends In Allergy I

Johannes Ring, Bernhard Przybilla

New Trends In Allergy I:

New Trends in Allergy III Johannes Ring, Bernhard Przybilla, 1991-12-13 The international symposium New Trends in Allergy held in Munich from July 13 to 15 1990 brought together for the third time since 1980 some of the most experienced researchers working in the field of allergy This volume comprises the papers presented at this meeting All over the world and not merely in the industrialized countries allergy is becoming a cause of evermore serious diseases In recent years research in the field of allergy has provided numerous important and fascinating results extending our knowledge considerably Despite the new insights into basic mechanisms of allergic reactions improved diagnostic methods and new therapeutic approaches however many questions remain to be answered including Are allergies really increasing in frequency If so what are the reasons Especially does environmental pollution play a role Which factors influence IgE synthesis Can the IgE immune response be switched off Does the nervous system interact with allergic reactions If so what are the mechanisms Are new approaches in allergy prophylaxis and allergy therapy efficient What measures have proven useful and deserve to be employed in daily practice In this volume these questions and other current topics are dealt with As each issue is covered by authors competent in the respective fields the result is an extensive and critical review of the state of the art Going through these papers one comes to the conviction that allergy research is a multifaceted explosively expanding most stimulating field of work Current Catalog National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70

New Trends in Allergy IV Johannes Ring, Heidrun Behrendt, Dieter Vieluf, 2012-12-06 There is no doubt among experts that the prevalence of allergic diseases has increased in many industrialized countries in recent years The reasons for this increase are unknown only suppositions exist Many people focus on environmental influences However the assumption that air pollution alone is responsible for this increase seems to be too simple many other influences including the genetic predisposition of individual patients allergen exposure and possibly socioeconomic factors also have to be taken into consideration Although our understanding of the complex mechanisms of allergic diseases has considerably improved thanks to the progress made in experimental immunology and allergology we still have a long way to go before this scientific knowledge is translated into new therapeutic modalities For this reason the scientific community welcomed the gathering of scientists from very different disciplines and different parts of the world at an international symposium New Trends in Allergy IV together with Environmental Allergy and Allergotoxicology III in Hamburg in 1995 This volume contains the invited papers covering a wide range from basic science to practical clinical diagnosis and therapy A further unique feature of this event was the concomitant first official workshop of the Environmental Pollution and Allergy Committee of the International Association of Allergy and Clinical Immunology IAACI at which the state of scientific knowledge in this field was defined and formulated *New Trends in Allergy V* Johannes Ring, Heidrun Behrendt, 2012-12-06 New Trends in Allergy V is the fifth volume of a series focussing on new trends in experimental and clinical allergology The interdisciplinary character is

documented by articles from such different fields as basic immunology chemistry molecular biology pharmacology epidemiology pneumology dermatology otolaryngology pediatrics and psychosomatic medicine Special emphasis is given to the role of both anthropogenic pollutants as well as natural environmental factors in the development of allergy Among new pathophysiological concepts dendritic cells lymphocyte interactions mast cells eosinophils and neutrophils as well as psycho neuro immunological influences are featured Practical aspects focus on asthma rhinoconjunctivitis atopic eczema occupational and food allergy as well as anaphylaxis The most recent therapeutic strategies comprise novel pharmacotherapy and allergen specific as well as unspecific e g anti IgE immunotherapy

New Trends in Allergy II Johannes Ring, Günter Burg, 2012-12-06 Anergic reactions and anergic diseases are found in many fields of medicine As well as affecting the skin allergic diseases occur in internal organs such as the lungs and the kidneys and in the vascular and nervous systems Interdisciplinary understanding and cooperation thus seem necessary to get a better insight into allergic reactions in the different fields of medicine in order that we may give our patients the best diagnostic and therapeutic care Allergic diseases are on the increase Studies from Sweden show that 15% of the population there are atopic and some people speculate that in Germany about 10% 15% of all adults suffer from one of the many different allergic conditions We in our clinic also have the impression that the incidence of atopic reactions has increased in recent years The figure of 15% would mean something like 200 000 people in Munich alone We all know that a wide variety of environmental factors can induce allergic reactions in the skin the respiratory system or internal organs The most important anergens in our environment are pollen molds animal dander housedust mite food or food additives various insects industrial compounds and drugs The direct costs of hospital and community medical care other services and drugs to help patients with asthma hay fever and skin allergies have increased considerably in the last 10 years The figures should make it clear to everybody that we are dealing with a health and environmental problem of great practical importance

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *New Trends in Allergy III* Johannes Ring, Bernhard Przybilla, 2012-12-06 The international symposium New Trends in Allergy held in Munich from July 13 to 15 1990 brought together for the third time since 1980 some of the most experienced researchers working in the field of allergy This volume comprises the papers presented at this meeting All over the world and not merely in the industrialized countries allergy is becoming a cause of evermore serious diseases In recent years research in the field of allergy has provided numerous important and fascinating results extending our knowledge considerably Despite the new insights into basic mechanisms of allergic reactions improved diagnostic methods and new therapeutic approaches however many questions remain to be answered including Are allergies really increasing in frequency If so what are the reasons Especially does environmental pollution play a role Which factors influence IgE synthesis Can the IgE immune response be switched off Does the nervous system interact with allergic reactions If so what are the mechanisms Are new approaches in allergy prophylaxis and allergy therapy efficient What measures have proven useful and

deserve to be employed in daily practice In this volume these questions and other current topics are dealt with As each issue is covered by authors competent in the respective fields the result is an extensive and critical review of the state of the art Going through these papers one comes to the conviction that allergy research is a multifaceted explosively expanding most stimulating field of work

New Trends in Allergy J. Ring, G. Burg, 2012-12-06 From the first to the third of August 1980 an international symposium entitled New Trends in Allergy was held in Munich sponsored by the Ludwig Maximilian University Munich in cooperation with the German Society for Allergy and Immunity Research and the European Society for Dermatological Research The symposium pursued two main goals to bring allergy oriented colleagues from various specialties such as dermatology otorhinolaryngology pediatrics internal medicine immunology and pulmonology together for interdisciplinary contacts and discussions and to attract internationally known experts in an effort to disseminate information on new and fundamental developments in allergology The fact that English has become the lingua franca at congresses for the exchange of ideas in medical specialties led to the decision to hold the symposium in English In spite of the mild handicap this posed for some participants it was also a major factor in the symposium's success This book contains the papers delivered by the invited speakers together with the poster presentations They cover both basic experimental research as well as clinical problems in allergology

New Trends in Allergy and Atopic Eczema J., Ring, U., Darsow, H., Behrendt, 2012-03-16 Allergy and allergic diseases have increased in prevalence worldwide during the last decade Relevant determinants influencing the development of allergic inflammation come from the environment and are either enhancing e.g. environmental pollutants both indoors and outdoors or protective e.g. parasite infestations causing early stimulation of the immune system In spite of considerable progress in experimental allergology and immunology there is still a great discrepancy between theoretical knowledge and practical performance in the routine treatment of patients with allergies The development of new therapeutic and preventive strategies for the future management of allergy is dependent on a better understanding of the pathomechanisms and molecular pathways involved Based on an international symposium this volume summarizes the latest findings in epidemiology pathophysiology and clinical aspects of allergic diseases such as asthma food allergy and especially atopic eczema Risk factors for the development of allergies and novel treatment strategies are carefully evaluated This update is essential reading for anyone interested in allergy doctors working in the clinical fields of dermatology pneumology internal medicine pediatrics ENT epidemiology and public health as well as researchers in molecular genetics immunobiology food and nutrition sciences and pharmacology
