Engineering Noise Control David A. Bies, Colin Hansen, Carl Howard, 2017-12-01 This classic and authoritative student textbook contains information that is not over simplified and can be used to solve the real world problems encountered by noise and vibration consultants as well as the more straightforward ones handled by engineers and occupational hygienists in industry The book covers the fundamentals of acoustics theoretical concepts and practical application of current noise control technology It aims to be as comprehensive as possible while still covering important concepts in sufficient detail to engender a deep understanding of the foundations upon which noise control technology is built Topics which are extensively developed or overhauled from the fourth edition include sound propagation outdoors amplitude modulation hearing protection frequency analysis muffling devices including 4 pole analysis and self noise sound transmission through partitions finite element analysis statistical energy analysis and transportation noise For those who are already well versed in the art and science of noise control the book will provide an extremely useful reference A wide range of example problems that are linked to noise control practice are available on www.causalsystems.com for free download

Urban Forest Acoustics Voichita Bucur, 2007-02-15 In general trees are viewed as admired symbolic individuals producing recreational spiritual and emotional rejuvenation Their lifespan can far exceed that of humans Planting a tree is a singular act of faith in the future creating a legacy for the community members who will follow The presence of trees in an urban area has been a reality for several centuries Beautiful trees in urban plazas are synonymous with a high sense of community and civic pride Trees significantly enhance the landscaping and appearance of the built environment City trees improve several architectural and engineering functions providing a green infrastructure for communities Trees create a friendlier environment for walking riding bikes and working by reducing glare and softening harsh traffic sounds and concrete views Trees enhance the viewing in urban areas of a variety of birds and small animals such as squirrels They are of extreme importance to the functioning of many different ecosystems Trees planted in the right place around buildings can improve air conditioning and heating costs by providing shade or by affecting wind speed or direction Even green trees with dense persistent needles can be used to provide a

windbreak while deciduous trees allow the sun to warm a house in winter The more compact the branches and foliage of a group of trees the greater their influence as a windbreak

Foundations of Vibroacoustics Colin Hansen, 2018-03-05 This text provides the foundation material for solving problems in vibroacoustics These include the prediction of structural vibration levels and sound pressure levels in enclosed spaces resulting from known force or acoustic pressure excitations and the prediction of sound levels radiated by vibrating structures The book also provides an excellent theoretical basis for understanding the processes involved in software that predicts structural vibration levels and structural sound radiation resulting from force excitation of the structure as well as sound levels in enclosed spaces resulting from vibration of part of the enclosing structure or resulting from acoustic sources within the enclosure The book is written in an easy to understand style with detailed explanations of important concepts It begins with fundamental concepts in vibroacoustics and provides a framework for problem solution in both low and high frequency ranges It forms a primer for students and for those already well versed in vibroacoustics the book provides an extremely useful reference It offers a unified treatment of both acoustics and vibration fundamentals to provide a basis for solving problems involving structural vibration sound radiation from vibrating structures sound in enclosed spaces and propagation of sound and vibration
