Nonlinear Acoustics in Fluids Robert Thomas Beyer, 1984 New York Van Nostrand Reinhold c1984 *Theory of Nonlinear Acoustics in Fluids* B.O. Enflo, C. M. Hedberg, 2002-05-31 The aim of the present book is to present theoretical nonlinear acoustics with equal stress on physical and mathematical foundations We have attempted explicit and detailed accounting for the physical phenomena treated in the book as well as their modelling and the formulation and solution of the mathematical models The nonlinear acoustic phenomena described in the book are chosen to give physically interesting illustrations of the mathematical theory As active researchers in the mathematical theory of nonlinear acoustics we have found that there is a need for a coherent account of this theory from a unified point of view covering both the phenomena studied and mathematical techniques developed in the last few decades The most ambitious existing book on the subject of theoretical nonlinear acoustics is Theoretical Foundations of Nonlinear Acoustics by O V Rudenko and S I Soluyan Plenum New York 1977 This book contains a variety of applications mainly described by Burgers equation or its generalizations Still adhering to the subject ascribed in the title of the book of Rudenko and Soluyan we attempt to include applications and techniques developed after the appearance of or not included in this book Examples of such applications are resonators
