## Nonlinear Evolution Equations:

**Nonlinear Evolution Equations and Related Topics** Wolfgang Arendt, Haim Brezis, Michel Pierre, 2004-08-20 Philippe Benilan was a most original and charismatic mathematician who had a deep and decisive impact on the theory of Nonlinear Evolution Equations. Dedicated to him Nonlinear Evolution Equations and Related Topics contains research papers written by highly distinguished mathematicians. They are all related to Philippe Benilan's work and reflect the present state of this most active field. The contributions cover a wide range of nonlinear and linear equations.

**Nonlinear Evolution Equations** Zhi-Zhong Sun, Qifeng Zhang, Guang-hua Gao, 2023-05-08 Nonlinear evolution equations are widely used to describe nonlinear phenomena in natural and social sciences. However, they are usually quite difficult to solve in most instances. This book introduces the finite difference methods for solving nonlinear evolution equations. The main numerical analysis tool is the energy method. This book covers the difference methods for the initial boundary value problems of twelve nonlinear partial differential equations. They are: Fisher equation, Burgers equation, regularized long wave equation, Korteweg de Vries equation, Camassa Holm equation, Schrödinger equation, Kuramoto Tsuzuki equation, Zakharov equation, Ginzburg Landau equation, Cahn Hilliard equation, epitaxial growth model, and phase field crystal model. This book is a monograph for the graduate students and science researchers majoring in computational mathematics and applied mathematics. It will be also useful to all researchers in related disciplines.

**Behavior of Solutions** Alain Haraux, 2006-11-15 [Nonlinear Evolution Equations And Painlevé Test](#) N. Euler, Willi-hans Steeb, 1988-10-01 This book is an edited version of lectures given by the authors at a seminar at the Rand Afrikaans University. *Lectures on Nonlinear Evolution Equations* Reinhard Racke, 2013-06-29 The book in hand is based on lectures which were given at the University of Bonn in the winter semesters of 1989/90 and 1990/91. The aim of the lectures was to present an elementary self-contained introduction into some important aspects of the theory of global small smooth solutions to initial value problems for nonlinear evolution equations. The addressed audience included graduate students of both mathematics and physics who were only assumed to have a basic knowledge of linear partial differential equations. Thus in the spirit of the underlying series this book is intended to serve as a detailed basis for lectures on the subject as well as for self-studies for students or for other newcomers to this field. The presentation of the theory is made using the classical method of continuation of local solutions with the help of a priori estimates obtained for small data. The corresponding global existence theorems have been proved mainly in the last decade focussing on fully nonlinear systems. Related questions concerning large data problems, the existence of weak solutions or the analysis of shock waves are not discussed. Also the question of optimal regularity assumptions on the coefficients is beyond the scope of the book and is touched only in part and exemplarily.
