Nonlinear Integral Operators And Applications:

Nonlinear Integral Operators and Applications Carlo Bardaro,Julian Musielak,Gianluca Vinti,2003 This volume presents a comprehensive treatment of approximation theory by means of nonlinear integral operator in function spaces In particular the fundamental notions of approximate identity for kernels of nonlinear operators and a general concept of modulus of continuity are developed **Advances in Summability and Approximation Theory** S. A. Mohiuddine,Tuncer Acar,2018-12-30 This book discusses the Tauberian conditions under which convergence follows from statistical summability various linear positive operators Urysohn type nonlinear Bernstein operators and also presents the use of Banach sequence spaces in the theory of infinite systems of differential equations It also includes the generalization of linear positive operators in post quantum calculus which is one of the currently active areas of research in approximation theory Presenting original papers by internationally recognized authors the book is of interest to a wide range of mathematicians whose research areas include summability and approximation theory One of the most active areas of research in summability theory is the concept of statistical convergence which is a generalization of the familiar and widely investigated concept of convergence of real and complex sequences and it has been used in Fourier analysis probability theory approximation theory and in other branches of mathematics The theory of approximation deals with how functions can best be approximated with simpler functions In the study of approximation of functions by linear positive operators Bernstein polynomials play a highly significant role due to their simple and useful structure And during the last few decades different types of research have been dedicated to improving the rate of convergence and decreasing the error of approximation **Function Spaces** Henryk Hudzik,Leszek Skrzypcazk,2000-07-18 This volume compiles research results from the fifth Function Spaces International Conference held in Poznan Poland It presents key advances modern applications and analyses of function spaces and contains two special sections recognizing the contributions and influence of Wladyslaw Orlicz and Genadil Lozanowskii New Perspectives on Approximation and Sampling Theory Ahmed I. Zayed,Gerhard Schmeisser,2014-11-03 Paul Butzer who is considered the academic father and grandfather of many prominent mathematicians has established one of the best schools in approximation and sampling theory in the world He is one of the leading figures in approximation sampling theory and harmonic analysis Although on April 15 2013 Paul Butzer turned 85 years old remarkably he is still an active research mathematician In celebration of Paul Butzer s 85th birthday New Perspectives on Approximation and Sampling Theory is a collection of invited chapters on approximation sampling and harmonic analysis written by students friends colleagues and prominent active mathematicians Topics covered include approximation methods using wavelets multi scale analysis frames and special functions New Perspectives on Approximation and Sampling Theory requires basic knowledge of mathematical analysis but efforts were made to keep the exposition clear and the chapters self contained This volume will appeal to researchers and graduate students in mathematics applied mathematics and engineering in particular engineers working in

signal and image processing   Mathematical Modelling, Applied Analysis and Computation Jagdev Singh,Devendra Kumar,Hemen Dutta,Dumitru Baleanu,Sunil Dutt Purohit,2019-08-31 This book contains original research papers presented at the International Conference on Mathematical Modelling Applied Analysis and Computation held at JECRC University Jaipur India on 6 8 July 2018 Organized into 20 chapters the book focuses on theoretical and applied aspects of various types of mathematical modelling such as equations of various types fuzzy mathematical models automata Petri nets and bond graphs for systems of dynamic nature and the usage of numerical techniques in handling modern problems of science engineering and finance It covers the applications of mathematical modelling in physics chemistry biology mechanical engineering civil engineering computer science social science and finance A wide variety of dynamical systems like deterministic stochastic continuous discrete or hybrid with respect to time are discussed in the book It provides the mathematical modelling of various problems arising in science and engineering and also new efficient numerical approaches for solving linear and nonlinear problems and rigorous mathematical theories which can be used to analyze a different kind of mathematical models The conference was aimed at fostering cooperation among students and researchers in areas of applied analysis engineering and computation with the deliberations to inculcate new research ideas in their relevant fields This volume will provide a comprehensive introduction to recent theories and applications of mathematical modelling and numerical simulation which will be a valuable resource for graduate students and researchers of mathematical modelling and industrial mathematics   **Commentationes mathematicae** ,2005   *Chinese Annals of Mathematics* ,1993   **Bulletin of the Belgian Mathematical Society, Simon Stevin** ,2005   **Far East Journal of Mathematical Sciences** ,2001   **Panamerican Mathematical Journal** ,2008   **Differential and Integral Equations** ,2007   **Scientific and Technical Aerospace Reports** ,1966   **Partial Integral Operators and Integro-Differential Equations** Jurgen Appell,Anatolij Kalitvin,Petr Zabrejko,2000-02-29 A self contained account of integro differential equations of the Barbashin type and partial integral operators It presents the basic theory of Barbashin equations in spaces of continuous or measurable functions including existence uniqueness stability and perturbation results The theory and applications of partial integral operators and linear and nonlinear equations is discussed Topics range from abstract functional analytic approaches to specific uses in continuum mechanics and engineering   *Mathematical Reviews* ,2003   The Rocky Mountain Journal of Mathematics ,2009   **Journal of analysis and its applications** ,1982   *Integrodifference Equations in Spatial Ecology* Frithjof Lutscher,2019-10-30 This book is the first thorough introduction to and comprehensive treatment of the theory and applications of integrodifference equations in spatial ecology Integrodifference equations are discrete time continuous space dynamical systems describing the spatio temporal dynamics of one or more populations The book contains step by step model construction explicitly solvable models abstract theory and numerical recipes for integrodifference equations The theory in the book is motivated and illustrated by many examples from conservation biology biological invasions pattern formation and

other areas In this way the book conveys the more general message that bringing mathematical approaches and ecological questions together can generate novel insights into applications and fruitful challenges that spur future theoretical developments The book is suitable for graduate students and experienced researchers in mathematical ecology alike

Advances in Mathematical Sciences and Applications ,1993   **Methods in Nonlinear Integral Equations** R Precup,2002-08-31 Methods in Nonlinear Integral Equations presents several extremely fruitful methods for the analysis of systems and nonlinear integral equations They include fixed point methods the Schauder and Leray Schauder principles variational methods direct variational methods and mountain pass theorems and iterative methods the discrete continuation principle upper and lower solutions techniques Newton s method and the generalized quasilinearization method Many important applications for several classes of integral equations and in particular for initial and boundary value problems are presented to complement the theory Special attention is paid to the existence and localization of solutions in bounded domains such as balls and order intervals The presentation is essentially self contained and leads the reader from classical concepts to current ideas and methods of nonlinear analysis   Functiones Et Approximatio Commentarii Mathematici ,1999
