Nonlinear Analysis Of Physiological Data:

Nonlinear Analysis of Physiological Data Holger Kantz, J. Kurths, Gottfried Mayer-Kress, 2012-12-06 This book is more than a standard proceedings volume although it is an almost direct result of the workshop on Nonlinear Analysis of Physiological Time Series held in Freital near Dresden Germany in October 1995 The idea of the meeting was as for previous meetings devoted to related topics such as the conference on dynamical diseases held near Montreal in February 1994 see CHAOS Vol 5 1 1995 to bring together experts on the techniques of nonlinear analysis and the theory of chaos and applicants from the most fascinating field where such methods could potentially be useful the life sciences The former group consisted mainly of physicists and mathematicians the latter was represented by physiologists and medical researchers and practitioners Many aspects of this workshop were unusual and not previously experienced Also the hosting institution the Max Planck Institute for Physics of Complex Systems MPIPKS at this time was brand new The organizers rather unconventional intention was to bring specialists of both groups together to really work together Therefore there was an excessive availability of computers and the possibility to numerically study time series data sets practitioners had supplied from their own fields e.g. electrocardiogram ECG data electroencephalogram EEG data data from the respiratory system from human voice human posture control and several others These data formed a much stronger link between theoreticians and applicants than any of the common ideas *Proceedings of the 5th Experimental Chaos Conference* Mingzhou Ding, 2001 The 5th Experimental Chaos Conference was a gathering of scientists and engineers who work on real world systems that behave in a nonlinear and often chaotic fashion The proceedings present discoveries of chaotic behavior explanation of nonlinear phenomena in the laboratory and applications of nonlinear and chaotic effects to devices and techniques for improving performance and surmounting technical obstacles Experimental work is presented on chaos in semiconductor superlattices spatiotemporal chaos in magnetic materials instabilities in magnetic fluids bifurcations of hexagonal patterns in lasers and discrete rotating waves New phenomena are exhibited on amplitude death in coupled oscillators vortex crystals wakes in soap films chaotic dynamics of ocean waves and microscopic chaos Applications of chaotic dynamics are offered in the areas of chaotic pulse trains in digital communications detection of changes in EEGs detection of unstable periodic orbits in noisy data cellular automata and warfare detection of n:m phase synchronization methods in acoustic chaos chaos in the machine tool cutting process and a nonlinear airfoil The broad range of topics and fields touches on a wide variety of systems whose behavior is now better understood and applied through the use of chaotic dynamics **The 5th Experimental Chaos Conference** Mingzhou Ding, William L Ditto, Louis M Pecora, Mark L Spano, 2001-04-02 The 5th Experimental Chaos Conference was a gathering of scientists and engineers who work on real world systems that behave in a nonlinear and often chaotic fashion The proceedings present discoveries of chaotic behavior explanation of nonlinear phenomena in the laboratory and applications of nonlinear and chaotic effects to devices and techniques for improving performance and

surmounting technical obstacles Experimental work is presented on chaos in semiconductor superlattices spatiotemporal chaos in magnetic materials instabilities in magnetic fluids bifurcations of hexagonal patterns in lasers and discrete rotating waves New phenomena are exhibited on amplitude death in coupled oscillators vortex crystals wakes in soap films chaotic dynamics of ocean waves and microscopic chaos Applications of chaotic dynamics are offered in the areas of chaotic pulse trains in digital communications detection of changes in EEGs detection of unstable periodic orbits in noisy data cellular automata and warfare detection of n m phase synchronization methods in acoustic chaos chaos in the machine tool cutting process and a nonlinear airfoil The broad range of topics and fields touches on a wide variety of systems whose behavior is now better understood and applied through the use of chaotic dynamics

Past and Present Variability of the Solar-terrestrial System

Giuliana Cini Castagnoli, Antonello Provenzale, 1997 The global climate of the Earth has significantly varied over the last millennia On a regional scale the climate has varied and does presently vary on many different time scales leading to a continuously changing pattern of temperatures humidity precipitation with important effects on the whole terrestrial biosphere Physicist are interested in understanding the mechanism at work by gathering data and properly analysing them

by building theoretical models and if possible making predictions on the future evolution of the system. Along these lines an important question is to understand the role of the solar forcing in order to unravel the internal mechanisms of variability of the Earth's climate from the variable forcing of the Sun. On the other hand one can learn about the past solar variability by reading into the terrestrial archives that provide us with proxy data on the history of both the Sun and the climate. Thus realizing that the Sun and the Earth form a closely coupled system where the variable properties of the former may affect in many subtle ways the behaviour of the latter is an important step toward the understanding of both. This book is explicitly devoted to these issues. First it is important to obtain reliable data from terrestrial archives and to properly date the records that have been measured. The first part of the book is devoted to these crucial aspects dealing with various types of proxy data and with the difficult issue of the dating of the records. Once obtained the data has to be interpreted. This process nowadays relies upon a plethora of data analysis methods that explicitly take into account the nonlinear nature of the system and try to elucidate the dynamics and the main processes active in the measured system. The second part of the book is devoted to the issue of data analysis and prediction. Finally once the data has been interpreted and analyzed theoretical models have to be built describing the dynamics of the system considered. Due to the extreme complexity of the Sun-Earth system as well as of its components the Sun itself and the Earth's climate drastic simplifications in the modelling efforts have to be accepted and one has to bear in mind that the models probably are nothing more than a pale image of the real dynamics. The third part of the book is devoted to the theoretical and numerical modelling of the solar and climatic variability and of their complex interactions. This volume gives an up to date view of the present state of this field.
