**Dynamical systems:** are modeled by a finite number of coupled first-order ordinary differential equation (ODE)

$$\dot{x}_1 = f_1(t, x_1, \dots, x_n, u_1, \dots, u_p)$$

$$\dot{x}_2 = f_2(t, x_1, \dots, x_n, u_1, \dots, u_p)$$

$$\vdots$$

$$\dot{x}_n = f_n(t, x_1, \dots, x_n, u_1, \dots, u_p)$$

**Nonlinear Phenomena in the Ionosphere** A. Gurevich, 2012-12-06 Nonlinear effects in the ionosphere cross modulation of radio waves have been known since the 1930s Only recently however has the rapid increase in the power and directivity of the radio transmitters made it possible to alter the properties of the ionosphere strongly and to modify it artificially by applying radio waves This has revealed a variety of new physical phenomena Their study is not only of scientific interest but also undisputedly of practical interest and is presently progressing very rapidly This monograph is devoted to an exposition of the present status of theoretical research on this problem Particular attention is paid naturally to problems in the development of which the author himself took part It is my pleasant duty to thank V L Ginzburg L P Pitaevskii V V Vas kov E E Tsedilina A B Shvartsburg and Va S Dimant for useful discussions and for valuable remarks during various stages of the work on the problem considered in this book Contents 1 Introduction **Nonlinear Phenomena in**

*Nonlinear Phenomena in Physics and Biology* Richard H. Enns, 2012-12-06 The Advanced Study Institute ASI on Nonlinear Phenomena in Physics and Biology was held at the Banff Centre Banff Alberta Canada from 17-29 August 1980 The Institute was made possible through funding by the North Atlantic Treaty Organization who supplied the major portion of the financial aid the National Research and Engineering Council of Canada and Simon Fraser University The availability of the Banff Centre was made possible through the co-sponsorship with NATO of the ASI by the Canadian Association of Physicists 12 invited lecturers and 82 other participants attended the Institute Except for two lectures on nonlinear waves by Norman Zabusky which were omitted because it was felt that they already had been exhaustively treated in the available literature this volume contains the entire text of the invited lectures In addition short reports on some of the contributed talks have also been included The rationale for the ASI and this resulting volume was that many of the hardest problems and most interesting phenomena being studied by scientists today are nonlinear in nature The nonlinear models involved often span several different disciplines a simple example being the Volterra type model in population dynamics which has its analogue in nonlinear optics and plasma physics the 3 wave problem in the discussion of the social behavior of animals and in biological competition and selection at the molecular level

**Nonlinear Phenomena in Physics** Francisco Claro, 2012-12-06 It was almost four hundred years ago that Galileo wrote in *Il Saggiatore* that the Book of Nature is written in mathematical characters This sentence inspired at the dawn of physics has proved with the passage of time to contain a deep truth and also a warning in order to understand Nature first we must learn to read mathematical characters Indeed writing physical law in such characters has proved not as hard as unraveling the content of the resulting equations In particular the lack of knowledge in the field of nonlinear mathematics has been a severe limitation in the past Thus the solution to equations such as the Navier Stokes equation in fluid dynamics has remained elusive The recent advent of fast computers and some important analytical and numerical results in the study of bifurcations and nonlinear waves have encouraged work both in theory and experiment involving nonlinear phenomena An explosive growth in the specialized literature penetrating most research areas in physics in the last few years has ensued This book contains the most recent advances in nonlinear physics in various fields including astrophysics

**Attractors, Bifurcations, & Chaos** Tönu Puu,2013-03-19 The present book relies on various editions of my earlier book *Nonlinear Economic Dynamics* first published in 1989 in the Springer series *Lecture Notes in Economics and Mathematical Systems* and republished in three more successively revised and expanded editions as a Springer monograph in 1991 1993 and 1997 and in a Russian translation as *Nelineynaiia Ekonomicheskaiia Dinamika* The first three editions were focused on applications The last was different as it also included some chapters with mathematical background material ordinary differential equations and iterated maps so as to make the book self contained and suitable as a textbook for economics students of dynamical systems To the same pedagogical purpose the number of illustrations were expanded The book published in 2000 with the title *Attractors Bifurcations and Chaos* *Nonlinear Phenomena in Economics* was so much changed that the author felt it reasonable to give it a new title There were two new mathematics chapters on partial differential equations and on bifurcations and catastrophe theory thus making the mathematical background material fairly complete The author is happy that this new book did rather well but he preferred to rewrite it rather than having just a new print run Material stemming from the first versions was more than ten years old while nonlinear dynamics has been a fast developing field so some analyses looked rather old fashioned and pedestrian The necessary revision turned out to be rather substantial
