**Nonlinear Physics of Complex Systems** Jurgen Parisi, Stefan C. Muller, Walter Zimmermann, 2014-01-15 *Nonlinear Physics of Complex Systems* Jürgen Parisi, Stefan C. Müller, Walter Zimmermann, 1996-10-04 The review articles in this book treat the overall nonlinear and complex behavior of nature from the viewpoint of such diverse research fields as fluid mechanics condensed matter physics biophysics biochemistry biology and applied mathematics Attention is focussed on a broad and comprehensive overview of recent developments and perspectives Particular attention is given to the so far unsolved problem of how to capture the mutual interplay between the microscopic and macroscopic dynamics that extend over various length and time scales The book addresses researchers as well as graduate students Cooperative Control of Dynamical Systems Zhihua Qu, 2009-02-07 Stability theory has allowed us to study both qualitative and quantitative properties of dynamical systems and control theory has played a key role in designing numerous systems Contemporary sensing and communication networks enable collection and subscription of geographically distributed information and such information can be used to enhance significantly the performance of many of existing systems Through shared sensing communication network heterogeneous systems can now be controlled to cooperate robustly and autonomously cooperative control is to make the systems act as one group and exhibit certain cooperative behavior and it must be pliable to physical and environmental constraints as well as be robust to intermittency latency and changing patterns of the information flow in the network This book attempts to provide a detailed coverage on the tools of and the results on analyzing and synthesizing cooperative systems Dynamical systems under consideration can be either continuous time or discrete time either linear or non linear and either unconstrained or constrained Technical contents of the book are divided into three parts The first part consists of Chapters 1 2 and 4 Chapter 1 provides an overview of cooperative behaviors kinematical and dynamical modeling approaches and typical vehicle models Chapter 2 contains a review of standard analysis and design tools in both linear control theory and non linear control theory Chapter 4 is a focused treatment of non negative matrices and their properties multiplicative sequence convergence of non negative and row stochastic matrices and the presence of these matrices and sequences in linear cooperative systems *Integrative Systems Approaches to Natural and Social Dynamics* M. Matthies, H. Malchow, J. Kriz, 2012-12-06 At the start of the new millennium mankind is challenged by a paradox the greater the apparent knowledge becomes the greater the uncertainty in understanding and predicting how the world works appears This book presents the outline of a new basis of Systems Science and a methodology for its applications in complex environmental economic social and technological systems **Brownian Agents and Active Particles** Frank Schweitzer, 2007-08-29 When we contemplate phenomena as diverse as electrochemical deposition or the spatial patterns of urban development it is natural to assume that they have nothing in common After all there are many levels in the hierarchy that builds up from atoms to human society and the rules that govern atoms are quite different from those that govern the geographical emergence of a

city The common view among many if not most biologists and social scientists is that the devil is entirely in the details This school of thought asserts that social science and biology have little or nothing in common and indeed many biologists claim that even different fields of biology have little in common If they are right then science can only proceed by recording vast lists of details that no common principles will ever link together Physics in contrast has achieved a parsimonious description for a broad range of phenomena based on only a few general principles The phenomena that physics addresses are unquestionably much simpler than those of biology or social science and on the surface appear entirely dissimilar A cell is far more complicated than a pendulum or an atom and human society being built out of a great many cells is far more complicated still Cells and societies have many layers of hierarchical organization with complex functional and computational properties they have identities idiosyncracies stemming from an accumulation of historical contingency that makes them impossible to characterize in simple mathematical terms Their complexity is far beyond that of the simple systems usually studied in physics

**Impacts on Earth** Daniel Benest, Claude Froeschle, 1998-03-18 Impact phenomena play an essential role in the formation of planets and great influence during their evolution The first part of this book describes the dynamics that propels asteroids in our solar system the second part is devoted to impact phenomena the third inspects terrestrial impacts of asteroids and the hazards due to space debris orbiting our planet The book addresses scientists working in astronomy extraterrestrial physics and geophysics But it should also be of great interest to a learned public that wants to know about the most recent developments in this fast moving field of theoretical and observational research

**Echolocation in Bats and Dolphins** Jeanette A. Thomas, Cynthia F. Moss, Marianne Vater, 2004 Although bats and dolphins live in very different environments are vastly different in size and hunt different kinds of prey both groups have evolved similar sonar systems known as echolocation to locate food and navigate the skies and seas While much research has been conducted over the past thirty years on echolocation in bats and dolphins this volume is the first to compare what is known about echolocation in each group to point out what information is missing and to identify future areas of research Echolocation in Bats and Dolphins consists of six sections mechanisms of echolocation signal production the anatomy and physiology of signal reception and interpretation performance and cognition ecological and evolutionary aspects of echolocation mammals theoretical and methodological topics and possible echolocation capabilities in other mammals including shrews seals and baleen whales Animal behaviorists ecologists physiologists and both scientists and engineers who work in the field of bioacoustics will benefit from this book
