Non-Fourier Heat Conduction Alexander I. Zhmakin, 2023-07-01 This book presents a broad and well structured overview of various non Fourier heat conduction models. The classical Fourier heat conduction model is valid for most macroscopic problems. However it fails when the wave nature of the heat propagation becomes dominant and memory or non local spatial effects become significant e.g. during ultrafast heating heat transfer at the nanoscale in granular and porous materials at extremely high values of the heat flux or in heat transfer in biological tissues. The book looks at numerous non Fourier heat conduction models that incorporate time non locality for materials with memory such as hereditary materials including fractional hereditary materials and or spatial non locality i.e. materials with a non homogeneous inner structure. Beginning with an introduction to classical transport theory including phase lag phonon and thermomass models the book then looks at various aspects of relativistic and quantum transport including approaches based on the Landauer formalism as well as the Green Kubo theory of linear response. Featuring an appendix that provides an introduction to methods in fractional calculus this book is a valuable resource for any researcher interested in theoretical and numerical aspects of complex non trivial heat conduction problems
