Nonparametric Functional Estimation and Related Topics George Roussas, 1991-04-30 About three years ago an idea was discussed among some colleagues in the Division of Statistics at the University of California Davis as to the possibility of holding an international conference focusing exclusively on nonparametric curve estimation The fruition of this idea came about with the enthusiastic support of this project by Luc Devroye of McGill University Canada and Peter Robinson of the London School of Economics UK The response of colleagues contacted to ascertain interest in participation in such a conference was gratifying and made the effort involved worthwhile Devroye and Robinson together with this editor and George Metakides of the University of Patras Greece and of the European Economic Communities Brussels formed the International Organizing Committee for a two week long Advanced Study Institute ASI sponsored by the Scientific Affairs Division of the North Atlantic Treaty Organization NATO The ASI was held on the Greek Island of Spetses between July 29 and August 10 1990 Nonparametric functional estimation is a central topic in statistics with applications in numerous substantive fields in mathematics natural and social sciences engineering and medicine While there has been interest in nonparametric functional estimation for many years this has grown of late owing to increasing availability of large data sets and the ability to process them by means of improved computing facilities along with the ability to display the results by means of sophisticated graphical procedures

conceptual mathematical and numerical analytic complexity of the methods Computational requirements may be limiting in I and ill either through the need for special programming effort or because of the difficulties of initial data management or because of the load of detailed analysis The implications of modern computational developments for statistical work can be illustrated in the context of the study of specific probabilistic models the development of general statistical theory the design of investigations and the analysis of empirical data While simulation is usually likely to be the most sensible way of investigating specific complex stochastic models computerized algebra has an obvious role in the more analytical work It seems likely that statistics and applied probability have made insufficient use of developments in numerical analysis associated more with classical applied mathematics in particular in the solution of large systems of ordinary and partial differential equations integral equations and integral differential equations and for the reaction of useful information from integral transforms Increasing emphasis on models incorporating specific subject matter considerations is one route to bridging the gap between statistical ana
