Multimedia Data Hiding / Digital Watermarking

- **What is it?**

  - Example: Picture in picture, words in words

  - It is "Steganography"

  - Secondary information in perceptual digital media data

- **Why hide information?**

  - Convey information without an additional channel

  - Hidden data is tied to content: Can be made difficult to separate data from content.

  - Covert communication: Adversary does not know it is there!

Raggo,Chet Hosmer,2012-12-31 As data hiding detection and forensic techniques have matured people are creating more advanced stealth methods for spying corporate espionage terrorism and cyber warfare all to avoid detection Data Hiding provides an exploration into the present day and next generation of tools and techniques used in covert communications advanced malware methods and data concealment tactics The hiding techniques outlined include the latest technologies including mobile devices multimedia virtualization and others These concepts provide corporate goverment and military personnel with the knowledge to investigate and defend against insider threats spy techniques espionage advanced malware and secret communications By understanding the plethora of threats you will gain an understanding of the methods to defend oneself from these threats through detection investigation mitigation and prevention Provides many real world examples of data concealment on the latest technologies including iOS Android VMware MacOS X Linux and Windows 7 Dives deep into the less known approaches to data hiding covert communications and advanced malware Includes never before published information about next generation methods of data hiding Outlines a well defined methodology for countering threats Looks ahead at future predictions for data hiding

Multimedia Data Hiding Min Wu,Bede Liu,2013-03-19 The digital information revolution has brought about profound changes in our society and our life New devices and powerful software have made it possible for consumers worldwide to create manipulate share and enjoy the multimedia information Internet and wireless networks offer ubiquitous channels to deliver and to exchange multimedia information for such pur poses as remote collaboration distant learning and entertainment With all these advances in multimedia coding and communication technologies over the past decade the major hurdle for allowing much broader access of multimedia assets and deployment of multimedia services no longer lies with bandwidth related issues but with how to make sure that content is used for its intended purpose by its intended recipients The core issue then be comes the development of secure management of content usage and delivery across communication networks Data hiding and digital watermarking are promising new technologies for multimedia information protection and

rights management Secondary data can be embedded imperceptibly in digital multimedia signals for a variety of applications including ownership protection authentication access con trol and annotation Data hiding can also be used to send side information in multimedia communication for providing additional functionalities or for enhancing performance The extraction of the embedded data mayor may not need knowledge of the original host media data In addition to im perceptibility robustness against moderate processing such as compression is also an important consideration

Multimedia Information Hiding Technologies and Methodologies for Controlling Data Kondo, Kazuhiro,2012-10-31 The widespread use of high speed networks has made the global distribution of digital media contents readily available in an instant As a result data hiding was created in an attempt to control the distribution of these copies by verifying or tracking the media signals picked up from copyright information such as the author or distributor ID Multimedia Information Hiding Technologies and Methodologies for Controlling Data presents the latest methods and research results in the emerging field of Multimedia Information Hiding MIH This comprehensive collection is beneficial to all researchers and engineers working globally in this field and aims to inspire new graduate level students as they explore this promising field

Data Hiding Fundamentals and Applications Husrev T. Sencar,Mahalingam Ramkumar,Ali N. Akansu,2004-08-20 Multimedia technologies are becoming more sophisticated enabling the Internet to accommodate a rapidly growing audience with a full range of services and efficient delivery methods Although the Internet now puts communication education commerce and socialization at our finger tips its rapid growth has raised some weighty security concerns with respect to multimedia content The owners of this content face enormous challenges in safeguarding their intellectual property while still exploiting the Internet as an important resource for commerce Data Hiding Fundamentals and Applications focuses on the theory and state of the art applications of content security and data hiding in digital multimedia One of the pillars of content security solutions is the imperceptible insertion of information into multimedia data for security purposes the idea is that this inserted information will allow detection of unauthorized usage Provides a theoretical framework for data hiding in a signal processing context Realistic applications in secure multimedia delivery Compression robust data hiding Data hiding for proof of ownership WATERMARKING Data hiding algorithms for image and video watermarking   Multimedia Data Hiding Kaushal M. Solanki,2005 The rapid growth in the demand and consumption of the digital multimedia content in the past decade has led to some valid concerns over issues such as content security authenticity and digital rights management Multimedia data hiding defined as imperceptible embedding of information into a multimedia host provides potential solutions but with many technological challenges In this thesis we address several fundamental issues in this field which provide the framework for the design of practical techniques that can seamlessly be deployed in real world applications

   Study on Data Hiding and Multimedia Data Communication Tirtha Sankar Das,Subir Kumar Sarkar,2011-08 The ease of accessibility of digital media and the simplicity of the digital systems has rendered the contents over the digital media highly insecure Thus content owners are eagerly seeking technologies having potential to protect their rights Thus the question of copyright associated with a digital entity for multimedia communication faces a severe threat from hackers Engineers have accepted this challenge in a gallant way Many data hiding techniques have been devised to protect the copyright of digital entities The technique of digital watermarking is one of the growing fields in which this problem of copyright has been addressed elegantly   **Transactions on Data Hiding and Multimedia Security VI** Yun Q.
