Multiparameter Stability Theory With Mechanical Applications:

Multiparameter Stability Theory With Mechanical Applications Alexei A Mailybaev, Alexander P Seyranian, 2003-12-31 This book deals with fundamental problems concepts and methods of multiparameter stability theory with applications in mechanics It presents recent achievements and knowledge of bifurcation theory sensitivity analysis of stability characteristics general aspects of nonconservative stability problems analysis of singularities of boundaries for the stability domains stability analysis of multiparameter linear periodic systems and optimization of structures under stability constraints Systems with finite degrees of freedom and with continuous models are both considered The book combines mathematical foundation with interesting classical and modern mechanical problems A number of mechanical problems illustrating how bifurcations and singularities change the behavior of systems and lead to new physical phenomena are discussed Among these problems the authors consider systems of rotating bodies tubes conveying fluid elastic columns under the action of periodic and follower forces optimization problems for conservative systems etc The methods presented are constructive and easy to implement in computer programs This book is addressed to graduate students academics researchers and practitioners in aerospace naval civil and mechanical engineering No special background is needed just a basic knowledge of mathematics and mechanics Multiparameter Stability Theory with Mechanical Applications, Series A Alexander P. Seyranian, Alexei A. Mailybaev, 2003 *Matrix Methods: Theory, Algorithms And Applications - Dedicated To The Memory Of Gene Golub* Vadim Olshevsky, Eugene E Tyrtyshnikov, 2010-04-05 Compared to other books devoted to matrices this volume is unique in covering the whole of a triptych consisting of algebraic theory algorithmic problems and numerical applications all united by the essential use and urge for development of matrix methods This was the spirit of the 2nd International Conference on Matrix Methods and Operator Equations from 23-27 July 2007 in Moscow that was organized by Dario Bini Gene Golub Alexander Guterman Vadim Olshevsky Stefano Serra Capizzano Gilbert Strang and Eugene Tyrtyshnikov Matrix methods provide the key to many problems in pure and applied mathematics However linear algebra theory numerical algorithms and matrices in FEM BEM applications usually live as if in three separate worlds In this volume maybe for the first time ever they are compiled together as one entity as it was at the Moscow meeting where the algebraic part was impersonated by Hans Schneider algorithms by Gene Golub and applications by Guri Marchuk All topics intervened in plenary sessions are specially categorized into three sections of this volume The soul of the meeting was Gene Golub who rendered a charming Golub's dimension to the three main axes of the conference topics This volume is dedicated in gratitude to his memory **New Trends in Control Theory** Vladimir G. Ivancevic, Tijana T. Ivancevic, 2013 New Trends in Control Theory is a graduate level monographic textbook It is a contemporary overview of modern trends in control theory The introductory chapter gives the geometrical and quantum background which is a necessary minimum for comprehensive reading of the book The second chapter gives the basics of classical control theory both linear and nonlinear The third

chapter shows the key role that Euclidean group of rigid motions plays in modern robotics and biomechanics The fourth chapter gives an overview of modern quantum control from both theoretical and measurement perspectives The fifth chapter presents modern control and synchronization methods in complex systems and human crowds The appendix provides the rest of the background material complementary to the introductory chapter The book is designed as a one semester course for engineers applied mathematicians computer scientists and physicists both in industry and academia It includes a most relevant bibliography on the subject and detailed index

Nonlinear Vibration with Control David Wagg, Simon Neild, 2009-12-03 The authors discuss the interrelationship of linear vibration theory for multi degree of freedom systems nonlinear dynamics and chaos and nonlinear control No other book covers these areas in the same way so this is a new perspective on these topics

Mathematical Reviews ,2006 *Advances in Mechanics of Solids* Ardeshir Guran, 2006 The contributions in this volume are written by well known specialists in the fields of mechanics materials modeling and analysis They comprehensively address the core issues and present the latest developments in these and related areas In particular the book demonstrates the breadth of current research activity in continuum mechanics A variety of theoretical computational and experimental approaches are reported covering finite elasticity vibration and stability and mechanical modeling The coverage reflects the extent and impact of the research pursued by Professor Haseganu and her international colleagues
