## **Multivariate Statistical Methods In Physical Anthropology:**

*Multivariate Statistical Methods in Physical Anthropology* G.N. van Vark, W.W. Howells, 2012-12-06 Physical anthropologists like other research workers are recognizing that the standard multivariate statistical techniques of recent decades are in need of refinement and greater precision. Increasingly it is felt that more sophisticated methods are called for specifically designed for the materials and problems at issue. To this end the editors were asked by organizers of the First Intercongress of the International Union of Anthropological and Ethnological Sciences to develop a symposium on this general subject. With the title of this book the symposium was held in Amsterdam on April 23-25 1981. Invited were mathematical statisticians who were known to have an acquaintance with and interest in anthropological problems together with anthropologists and human geneticists who consider multivariate methodology essential for their research. This volume constitutes an updated and revised selection from among the papers presented together with a few supplementary papers by authors who were not present but whose work fills out the intended coverage and makes the volume more complete with respect to the state of affairs in the field. The papers are devoted both to new methodology and to its practical application. Mathematical statisticians may wish to know more about the biological nature and the kinds of materials and samples on which mathematical thinking can be exercised. Anthropologists as practitioners may not be fully aware of the possibilities and limitations in particular mathematical models and methods. Our purpose has been to bring the two groups together for personal discussions across disciplinary lines as well as within disciplines.

**Multivariate Statistical Methods in Physical Anthropology** Vark G N, William White Howells, 1984     **Biological Distance Analysis** Marin A. Pilloud, Joseph T. Hefner, 2016-07-08 Biological Distance Analysis: Forensic and Bioarchaeological Perspectives synthesizes research within the realm of biological distance analysis highlighting current work within the field and discussing future directions. The book is divided into three main sections. The first section clearly outlines datasets and methods within biological distance analysis beginning with a brief history of the field and how it has progressed to its current state. The second section focuses on approaches using the individual within a forensic context including ancestry estimation and case studies. The final section concentrates on population based bioarchaeological approaches providing key techniques and examples from archaeological samples. The volume also includes an appendix with additional resources available to those interested in biological distance analyses. Defines datasets and how they are used within biodistance analysis. Applies methodology to individual and population studies. Bridges the sub fields of forensic anthropology and bioarchaeology. Highlights current research and future directions of biological distance analysis. Identifies statistical programs and datasets for use in biodistance analysis. Contains case studies and thorough index for those interested in biological distance analyses.

*Between Data Science and Applied Data Analysis* Martin Schader, Wolfgang A. Gaul, Maurizio Vichi, 2012-12-06 The volume presents new developments in data analysis and classification and gives an overview of the state of the art in these scientific fields and relevant applications.

Areas that receive considerable attention in the book are clustering discrimination data analysis and statistics as well as applications in economics biology and medicine it provides recent technical and methodological developments and a large number of application papers demonstrating the usefulness of the newly developed techniques

**Research Methods in Human Skeletal Biology** Elizabeth A. DiGangi, Megan K. Moore, 2012-11-27 Research Methods in Human Skeletal Biology serves as the one location readers can go to not only learn how to conduct research in general but how research is specifically conducted within human skeletal biology. It outlines the current types of research being conducted within each sub specialty of skeletal biology and gives the reader the tools to set up a research project in skeletal biology. It also suggests several ideas for potential projects. Each chapter has an inclusive bibliography which can serve as a good jumpstart for project references. Provides a step by step guide to conducting research in human skeletal biology. Covers diverse topics sexing, aging, stature and ancestry estimation and new technologies histology, medical imaging and geometric morphometrics. Excellent accompaniment to existing forensic anthropology or osteology works

**Sex Estimation of the Human Skeleton** Alexandra R. Klales, 2020-05-30 Sex Estimation of the Human Skeleton is a comprehensive work on the theory, methods and current issues for sexing human skeletal remains. This work provides practitioners a starting point for research and practice on sex estimation to assist with the identification and analysis of human remains. It contains a collection of the latest scientific research using metric and morphological methods and contains case studies where relevant to highlight methodological application to real cases. This volume presents a truly comprehensive representation of the current state of sex estimation while also detailing the history and how we got to this point. Divided into three main sections, this reference text first provides an introduction to the book and to sex estimation overall, including a history, practitioner preferences and a deeper understanding of biological sex. The second section addresses the main methodological areas used to estimate sex, including metric and morphological methods, statistical applications and software. Each chapter topic provides a review of older techniques and emphasizes the latest research and methodological improvements. Chapters are written by practicing physical anthropologists and also include their latest research on the topics as well as relevant case studies. The third section addresses current considerations and future directions for sex estimation in forensic and bioarchaeological contexts, including DNA, secular change and medical imaging. Sex Estimation of the Human Skeleton is a one-of-a-kind resource for those involved in estimating the sex of human skeletal remains. Provides the first comprehensive text reference on sex estimation with historical perspectives and current best practices. Contains real case studies to underscore key estimation concepts. Demonstrates the changing role of technology in sex estimation

**Bioarchaeology of East Asia** Kate Pechenkina, Marc Oxenham, 2025-04-01 A collection of research on migration, diet and health in the past across a culturally complex region. Bioarchaeology of East Asia integrates studies on migration, diet and diverse aspects of health through the study of human skeletal collections in a region that developed varying forms of agriculture. East Asia's complex population

movements and cultural practices provide biological markers that allow for the testing of multiple hypotheses about interactions in past communities Exploring the interplay between humans and their environments this volume considers millet agriculture mobile pastoralism with limited cereal farming and rice farming in combination with reliance on marine resources Many of these rare subsistence strategies are more or less exclusive to East Asia These advanced contributions will significantly boost collaborative work among bioarchaeologists and other scientists working in the region A volume in the series Bioarchaeological Interpretations of the Human Past Local Regional and Global Perspectives edited by Clark Spencer Larsen
