Municipal Solid Waste Incinerator Residues A.J. Chandler,T.T. Eighmy,O. Hjelmars,D.S. Kosson,S.E. Sawell,J. Vehlow,H.A. van der Sloot,J. Hartlén,1997-04-09 This text covers a broad spectrum of topics pertinent to the management of incinerator residues Background information includes a history of incineration and the influence of municipal waste composition incinerator type air pollution control technologies on residue quality Physical chemical and leaching characteristics for the various ash streams are described along with recommended sampling and evaluation methodologies Residue handling and management options including treatment utilisation and disposal are also discussed in detail

Characterization of Municipal Solid Waste Incinerator Residues for Utilization: Leaching Properties H. A. van der Sloot,G. J. de Groot,1990 *Eco-efficient concrete* M. Tyrer,2013-02-04 The potential to use municipal waste incineration products in concrete has been examined over many years both as a source of aggregates and as supplementary cementitious materials SCM With an understanding of the chemical evolution of these materials in the cement environment both applications provide routes to the re use of these materials in construction Fly ashes and air pollution control residues must be washed to remove their considerable chloride content before use after which the remaining solids largely aluminosilicates may replace some fraction of the cementitious binder Care must be taken when using these materials as SCMs as volatile heavy metals present in the original waste may be concentrated in the fly ash The bottom ashes from municipal solid waste MSW incineration also show sufficient pozzolanic reactivity when finely ground to replace some cement in the binder phase They may also serve directly as aggregate in concrete although the irregular and angular particle shape may reduce its workability somewhat Most MSW bottom ashes contain sufficient free aluminium to disrupt the setting reactions of the binder through hydrolysis reactions at high pH Consequently this must be removed or reacted by pre treatment prior to use in concrete and means of doing so are described here Slower detrimental reactions are also known such as alkali silica reaction especially of container glass fragments and these are considered here Lastly the use of MSW incineration products in manufactured aggregates is described comparing sintering melting and recrystallization and plasma processing with low temperature methods such as rapid carbonation technology Testing of residues from incineration of municipal solid waste ,2004 **An International Perspective on Characterisation and Management of Residues from Municipal Solid Waste Incinerator Residues** A. John Chandler,International Ash Working Group,1994

Characterization and Utilization of Municipal and Utility Sludges and Ashes: Municipal incinerator residues Norman L. Hecht,D. S. Duvall,1975 **Evaluation of Cement, Lime, and Asphalt Amended Municipal Solid Waste Incinerator Residues** Peter J. Holland,AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH.,1989 The ability of type II portland cement hydrated lime and AC 10 asphalt to solidify stabilize municipal solid waste MSW incinerator residues was evaluated Leachate withdrawal was controlled at 0.13 ml/min until final liquid solid ratios of 0.6:0.4 and 0.9 was achieved in the cement

lime and residue control columns respectively The leachates were analyzed for metal Pb Ni Zn Al Ca Mn Na Cd Cu Fe and anion Cl SO₄ NO₃ PO₄ Br concentrations alkalinity pH redox potential and conductivity Successful immobilization of all tested metals except lead aluminum and nickel were seen in the cement amended leachates while only zinc and manganese were leached from the lime amended columns in concentrations exceeding those found in the residue control The test results revealed little differences in metal mobility between wastes of varying percent amendment addition In general cement lime and asphalt amended residues demonstrated reduced mobility for cadmium manganese and aluminum relative to the concentrations measured in the control leachates Compressive strength tests were performed on replicate specimens of all cement lime and asphalt amended matrices as a measure of residue solidification

Theses AW **Treatment and Utilization of Combustion and Incineration Residues** Lei Wang,Dan Tsang,Jianhua Yan,2024-05-25

Co-disposal of Municipal Solid Waste Incineration Residues P. Scott,1993 [The National Incinerator Testing and Evaluation Program \(NITEP\)](#) S. E. Sawell,T. W. Constable,Canada. Environment Canada,Canada. Solid Waste Management Division,1993

The objectives of the National Incinerator Testing and Evaluation Program NITEP were to define optimal design and operating characteristics for different types of municipal solid waste MSW incinerators relate the defined operations to atmospheric emissions identify the best options to control emissions and develop guidelines for the operation of MSW incinerators and for emissions This report provides a summary of the facilities tested under the NITEP ash characterization program the experimental approach used to evaluate the residues and the type of data generated

The data have been compiled and presented to illustrate significant trends and to show how these trends relate to the guidelines for ash management The feasibility of using solidification as an acceptable treatment technique for these residues is also presented

Guidelines for Use of Incinerator Residue as Highway Construction Material Robert J. Collins,R. H. Miller,S. K. Ciesielski,1977 This manual contains background information on the composition and characteristics of basic types of incinerator residues A recommend classification system is presented The use of incinerator residues in structural fill stabilized base and bituminous paving applications are discussed Included are specific recommendations for materials handling and preparation laboratory testing procedures engineering properties and design and construction procedures for these applications This manual also includes recommended laboratory test procedures for determining the loss on ignition and physical composition of incinerator residue samples A separate section is devoted to a summary of situations which are favorable as well as unfavorable to the utilization of municipal incinerator residue in highway or street construction This manual discusses unfused residues from incinerator and pyrolysis operations

Combustion Ash Residue Management Richard W. Goodwin,2013-12-05 Combustion Ash and Residue Management assists owners and operators of Coal fired and Resource Recovery Power Plants By applying the principles and reviewing the case studies examples described within this book accidents and upsets can be avoided and regulatory permitting can be achieved reducing costs This unique book is an essential reference for anybody responsible for disposal or utilization of combustion residues It reflects over 30 years of engineering practice applying the principles of concrete chemistry and civil engineering soil mechanics as confirmed by field data Dr Richard Goodwin assesses the composition and environmental impact of combustion residues and provides not only best practices for safe disposal but also a blueprint for effective reuse including applications like structural fill grout and capping material Case studies and cost information for ash disposal options are included in addition to the lessons learned by high profile failures such as the TVA Kingston fossil plant coal fly ash slurry spill in 2008 It

also applies engineering principles to discuss how to avoid future upsets including better operator training and monitoring methods A comprehensive update to reflect changes in legislation and practice including new material on the safe disposal or beneficial use of coal ash A straightforward engineering approach providing practical guidance and field data Written by an established expert in the field **The Co-disposal of Municipal Solid Waste Incineration Residues** P. Baldwin,C. Macdonald,Great Britain. Department of the Environment. Wastes Technical Division,1995 **Science Project** Great Britain. Environment Agency,2004 **Journal of Geotechnical Engineering** ,1993 **Incineration Technologies** Alfons Buekens,2013-01-04 Waste incineration is the art of completely combusting waste while maintaining or reducing emission levels below current emission standards Where possible objectives include the recovering of energy as well as the combustion residues Successful waste incineration makes it possible to achieve a deep reduction in waste volume obtain a compact and sterile residue and eliminate a wide array of pollutants This book places waste incineration within the wider context of waste management and demonstrates that in contrast to landfills and composting waste incineration can eliminate objectionable and hazardous properties such as flammability and toxicity result in a significant reduction in volume and destroy gaseous and liquid waste streams leaving little or no residues beyond those linked to flue gas neutralization and treatment Moreover waste incineration sterilizes and destroys putrescible matter and produces usable heat Incineration Technologies first appeared as a peer reviewed contribution to the Encyclopedia of Sustainability Science and Technology It provides detailed treatment of the challenges of this technically complex process which requires huge investment and operating costs as well as good technical skills in maintenance and plant operation Particular attention is paid to technologies for ensuring the complete burn out of flue gas and residues and for controlling the resulting pollutants

Incinerator Residue in Bituminous Base Construction J. Haynes,William Burl Ledbetter,1975 The use of incinerator residue as an aggregate in a bituminous base pavement tremed littercrete was studied Following a laboratory investigation a test section consisting of the experimental hot mixed littercrete pavement and a conventional hot mixed asphaltic concrete pavement were placed on a city street in Houston Texas The two pavements were covered with a 1 1 2 in 3 8 cm wearing surface Samples were taken of the loose mix Cores were taken after compaction before traffic and cores were taken after six months in service Results of laboratory and field evaluations show that the littercrete pavement meets current specifications for asphalt stabilized materials and littercrete can be constructed using conventional equipment and technology
