The past few years have seen the emergence of a growing widespread desire in this country and indeed everywhere that positive actions be taken to restore the quality of our environment and to protect it from the degrading effects of all forms of pollution air noise solid waste and water Since pollution is a direct or indirect consequence of waste if there is no waste there can be no pollution and the seemingly idealistic demand for zero discharge can be construed as a demand for zero waste However as long as there is waste we can only attempt to abate the consequent pollution by converting it to a less noxious form In those instances in which a particular type of pollution has been recognized three major questions usually arise 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of this series of books is to help the reader to formulate answers to the last two of the above three questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major factor contributing to the success of environmental engineering and in large measure has accounted for the establishing of a methodology of pollution control Foundations of Community Medicine, 2/e Dhaar, 2008 The special features that distinguish Foundations of Community Medicine in its present form are Contains well organized material which is singularly free from repetition confusion and uncertainty and which ensures availability of all the relevant information on a topic at one place Lays adequate stress on applied aspects of preventive medicine and public health with focus on Indian situation Contains detailed description of public health practices namely immunization disinfection and sterilization notification isolation and quarantine public health surveillance and population screening Extends a managerial treatment to the description of health organizations health programmes and health care systems existing in the country Incorporates a comprehensive coverage of physical social and biological environments laying due stress on environmental pollution and its control Provides adequate information on occupational hazards and industrial problems in consideration of the advancing industrialization in India Encompasses an elaborate exposition on important issues concerning maternal health infant health child health adolescent health and geriatric health in an exclusive section devoted to personal health care Presents a uniquely simplified and readily intelligible discourse on basic concepts of epidemiology and statistics which are usually abhorred by medical students Incorporates a detailed description of the National Population Policy and National Health Policy in consideration of their crucial importance in the formulation of National Health Care Programmes for the country Contains numerous comparison tables flowcharts graphs and diagrams to improve comprehension and facilitate retention of the subject matter Encloses multiple solved examples on epidemiology vital statistics and basic statistics to enable the students to calculate rates ratios and statistical values of applied significance Contains elaborate discussion on Indian population problem human disasters as well as emerging and re emerging diseases Provides adequate information on Indian
