## Normal Accidents:

**Normal Accidents** Charles Perrow, 1999 This text analyzes the social side of technological risk. It argues that the conventional engineering approach to ensuring safety fails because systems complexity makes failures inevitable. It provides a framework for analyzing risks and the complex systems which often engender them. Normal Accidents Charles Perrow, 1984 Analyzes the social side of technological risk. *Rational Accidents* John Downter, 2024-01-16 An unflinching look at the unique challenges posed by complex technologies we cannot afford to let fail and why the remarkable achievements of civil aviation can help us understand those challenges. Nuclear reactors, deep sea drilling platforms, deterrence infrastructures, these are all complex and formidable technologies with the potential to fail catastrophically. In *Rational Accidents* John Downter outlines a new perspective on technological failure, arguing that undetectable errors can lurk in even the most rigorous and rational assessments of these systems due to the inherent limits of engineering tests and models. Downter finds that it should be impossible from an epistemological viewpoint to achieve the near perfect reliability that we require of our most safety critical technologies. There is however one such technology that demonstrably appears to achieve these impossible reliabilities: jetliners. Downter looks closely at civil aviation and how it has reckoned with the problem of failure. He finds that the way we conceive of jetliner reliability hides the real practices by which it is achieved. And he shows us why those practices are much less transferrable across technological domains than we are led to believe. Fully understanding why jetliners don't crash, he concludes, should lead us to doubt the safety of other ultra reliable technologies. A unique and sobering exploration of technological reliability from an STS perspective, *Rational Accidents* is essential reading for understanding why our most safety critical technologies are even more dangerous than we believe.
