

The Monetary Dynamics of International Adjustment under Fixed and Flexible Exchange Rates¹

The basic criticism hitherto advanced against a system of fixed exchange rates—that the powerful instruments of monetary policy are tied to the goal of external balance thereby ruling out a domestic rate of interest compatible with full employment—has been the subject of continued debate over past decades. First advanced over a century ago during the bullionist controversy, and revived in this century by Fisher and Keynes, the argument poses the conflict between internal stability (stable employment and price levels) and external stability (balance-of-payments equilibrium at a fixed exchange parity). In the absence of trade restrictions, which cause inefficiency and invite retaliation, one of the targets implicit in the concepts of internal and external stability must be abandoned. But, so the argument runs, full employment is a prime goal of public policy, balance-of-payments equilibrium is a long-run necessity, and sufficient price flexibility does not exist in the modern world. The rate of exchange must therefore be freed.

The argument is based on money illusion: The community is unwilling to accept variations in real income through changes in money prices, but it will accept the same changes in real income through adjustments in the rate of exchange. A flexible exchange system may then be interpreted as a device for providing a more acceptable means (than employment changes) of altering the real income of the community. But what if money illusion is absent? Then, it is argued, there is no reason for changing to a system of flexible exchange rates: "If internal prices were as flexible as exchange rates, it would make little economic difference whether adjustments were brought about by changes in exchange rates or by equivalent changes in internal prices."²

In this chapter it will be demonstrated that although this view, under certain circumstances, may be valid in statics, it is entirely erroneous in dynamics.

² Friedman [16]; see also Meade ([56], p. 190) for a similar statement. It is, of course, recognized that monetary differences between the two systems exist based on consideration of fixed debts.

Practice Clinton Arno Greene,1992 *Uncertainty, Expectations, and Financial Instability* Eric Barthalon,2014-11-18 Eric Barthalon applies the neglected theory of psychological time and memory decay of Nobel Prize winning economist Maurice Allais 1911 2010 to model investors psychology in the present context of recurrent financial crises Shaped by the behavior of the demand for money during episodes of hyperinflation Allais s theory suggests economic agents perceive the flow of clocks time and forget the past at a context dependent pace rapidly in the presence of persistent and accelerating inflation and slowly in the event of the opposite situation Barthalon recasts Allais s work as a general theory of expectations under

uncertainty narrowing the gap between economic theory and investors behavior Barthalon extends Allais's theory to the field of financial instability demonstrating its relevance to nominal interest rates in a variety of empirical scenarios and the positive nonlinear feedback that exists between asset price inflation and the demand for risky assets. Reviewing the works of the leading protagonists in the expectations controversy Barthalon exposes the limitations of adaptive and rational expectations models and by means of the perceived risk of loss calls attention to the speculative bubbles that lacked the positive displacement discussed in Kindleberger's model of financial crises. He ultimately extrapolates Allaisian theory into a pragmatic approach to investor behavior and the natural instability of financial markets. He concludes with the policy implications for governments and regulators. Balanced and coherent this book will be invaluable to researchers working in macroeconomics financial economics behavioral finance decision theory and the history of economic thought. **Markets,**

Risk and Money Bertrand Munier, 2012-12-06 Most of the writings of Maurice Allais 1988 Nobel Laureate in Economics have only been published in French. Thus to date economists management scientists and operations researchers have been severely restricted in gaining access to his work. Markets Risk and Money presents for the first time in English Allais's unconventional views on economic competition the significance of free markets and overlapping generations risk psychology central banking taxation systems monetary dynamics and reform. The volume provides a consistent vision of our society and offers readers an evaluation of the impact of Allais's work on our present body of knowledge. Markets Risk and Money contains contributions from a number of distinguished European and American scholars including Bertrand Munier, Thierry Montbrial, J. Lesourne, Claude Ponsard, Edmond Malinvaud, Andr Babeau, Marcel Boiteux, Lola L. Lopes, Mark J. Machina, James B. Ramsey, Xavier Freixas, B. Roy, and D. Bouyssou. Daily reports appeared of international debt crises of the covert bankruptcy of deposit insurance and of the near bankruptcy of one great financial institution after another. The great stock market crash of October 19 and 20 1987 demonstrated that extreme instability can happen. It is generally asserted that the consequences of October 19th and 20th would have been disastrous if the Federal Reserve and Treasury interventions had not set things right. In 1933 financial markets in the United States and throughout the capitalist world collapsed. In the light of historical experience the past 55 years are the anomaly. The papers collected in this volume come from various backgrounds and research paradigms. A common theme runs through these papers that makes the collection both interesting and important. The authors take seriously the obvious evidence that capitalist economies progress through time by lurching.
