Monovalent Cations In Biological Systems:

Monovalent Cations in Biological Systems Charles A. Pasternak,2024-12-06 This unique volume provides an integrated overview of the subject of monovalent cations specifically aimed at students and researchers It is divided into two parts the first deals with the processes by which monovalent cations are transported across biological membranes the second deals with the processes that are affected by changes in intracellular cations Each chapter describes in simple biochemical terms the interaction between one or more monovalent cations and a particular biological system of importance to current understanding of body function in health and disease This useful publication is invaluable to students and researchers in biochemistry physiology neurology pharmacology anesthesiology cardio pulmonology hematology laboratory medicine endocrinology gastroenterology internal medicine psychiatry urology biomedical physics and medical nutrition **Metal**

Andreoli,2013-04-17 Membrane Physiology is a soft cover book containing portions of Physiology of Membrane Disorders published in larger hard cover form in 1978 The parent volume was divided into five parts described in detail in the Preface to the hard cover edition which is reproduced in this volume The present version of Membrane Physiology incorporates the first three of these parts including a section on the Nature of Biological Membranes a section on Methods for Studying Membranes and a section on General Problems in Membrane Biology It is the hope of the Editors that this smaller volume will be of value to individuals interested in general physiology the methods for studying general physiology and its potential application to problems of clinical and physiological relevance The Preface to Physiology of Membrane Disorders indicates our general reasoning for developing such a volume THOMAS E ANDREOLI JOSEPH F HOFFMAN DARRELL D FANESTIL Vll Preface to Physiology of Membrane Disorders The purpose of this book is to provide the reader with a rational frame of reference for assessing the pathophysiology of those disorders in which derangements of membrane transport processes are a major factor responsible for the clinical manifestations of disease **Proceedings of**

of Electric and Electromagnetic Fields with Living Systems Martin Blank,E. Findl,2013-11-11 Although there is general agreement that exogenous electric and electromagnetic fields influence and modulate the properties of biological systems there is no consensus regarding the mechanisms by which such fields operate It is the purpose of this volume to bring together and examine critically the mechanistic models and concepts that have been proposed We have chosen to arrange the papers in terms of the level of biological organization emphasized by the contributors Some papers overlap categories but the progression from ions and membrane surfaces through macromolecules and the membrane matrix to integrated

systems establishes a mechanistic chain of causality that links the basic interactions in the relatively well understood simple systems to the complex living systems where all effects occur simultaneously. The backgrounds of the invited contributors include biochemistry, biophysics, cell biology, electrical engineering, electrochemistry, electrophysiology, medicine and physical chemistry. As a result of this diversity, the mechanistic models reflect the differing approaches used by these disciplines to explain the same phenomena. Areas of agreement define the common ground while the areas of divergence provide opportunities for refining our ideas through further experimentation. To facilitate the interaction between the different points of view, the authors have clearly indicated those published observations that they are trying to explain i.e. the experiments that have been critical in their thinking. This should establish a consensus regarding important observations. In the discussion of theories, The Journal of Physical Chemistry Wilder Dwight Bancroft, 1916 Includes section New Books

Computational studies of RNA and DNA Jirí Šponer, Filip Lankaš, 2006-10-05 This book integrates modern computational studies of nucleic acids ranging from advanced electronic structure quantum chemical calculations through explicit solvent molecular dynamics MD simulations up to mesoscopic modelling with the main focus given to the MD field. It gives an equal emphasis to the leading methods and applications while successes as well as pitfalls of the computational techniques are discussed. *Studies of Cation-nucleoprotein Interactions* Man Li, 1998 *The Lightest Metals* Timothy P. Hanusa, 2015-10-12 The first seven metals in the periodic table are lithium, beryllium, sodium, magnesium, aluminium, potassium and calcium known collectively as the lightest metals. The growing uses of these seven elements are enmeshing them ever more firmly into critical areas of 21st century technology including energy storage, catalysis and various applications of nanoscience. This volume provides comprehensive coverage of the fundamentals and recent advances in the science and technology of the lightest metals. Opening chapters of the book describe major physical and chemical properties of the metals, their occurrence and issues of long term availability. The book goes on to discuss a broad range of chemical features including low oxidation state chemistry, organometallics, metal centered NMR spectroscopy and cation interactions. Current and emerging applications of the metals are presented including lithium ion battery technology, hydrogen storage chemistry, superconductor materials, transparent ceramics, nano enhanced catalysis and research into photosynthesis and photoelectrochemical cells. Pardha Saradhi, 2001 This text updates the current understanding of the important biophysical aspects in living systems. Efforts are made to precisely furnish major biophysical aspects associated with structural and functional aspects starting with water, macromolecules and membranes up to organ systems. Twenty independent research groups actively involved in unravelling various aspects of living systems through a multidisciplinary approach using biophysics along with biochemistry and molecular biology have shared their experiences with examples in the book. Three chapters on neurobiology have also been
