Model-based Visual Tracking Giorgio Panin,2011-04-12 This book has two main goals to provide a unified and structured overview of this growing field as well as to propose a corresponding software framework the OpenTL library developed by the author and his working group at TUM Informatik The main objective of this work is to show how most real world application scenarios can be naturally cast into a common description vocabulary and therefore implemented and tested in a fully modular and scalable way through the definition of a layered object oriented software architecture The resulting architecture covers in a seamless way all processing levels from raw data acquisition up to model based object detection and sequential localization and defines at the application level what we call the tracking pipeline Within this framework extensive use of graphics hardware GPU computing as well as distributed processing allows real time performances for complex models and sensory systems
