**Macrophages and Natural Killer Cells** Sigurd J. Normann, 2012-12-06 This book is the outcome of a meeting held in Davos Switzerland February 7-12 1982 focused primarily on mononuclear phagocytes and on natural killer NK cells This IX International RES Congress was attended by 489 scientists from 31 countries and there were 340 scientific presentations in oral or poster session The essential purpose of the Congress was to bring together scientists representing various aspects of mononuclear phagocyte biology to review and examine critically the effects and mechanisms of macrophage growth control as well as the participation of these cells in the afferent and efferent limbs of the immune response Additional topics included the production and distribution of mononuclear phagocytes the intrinsic and extrinsic regulation of these cells and the origin nature function and regulation of NK cells The ultimate goal of the Congress was to enhance communication between scientists in various countries and disciplines so that new research directives could be defined with which to explore basic aspects of macrophage and NK cell participation in the control of cancer and infection *Luminescence Biotechnology* Knox Van Dyke, Christopher Van Dyke, Karen Woodfork, 2001-12-20 The dangers and drawbacks inherent in radioactivity based methods along with a demonstrated and dramatic increase in sensitivity have precipitated a major shift towards luminescence measurements and visualization techniques Their use has now spread even to traditional clinical environments and their applications have grown from clinical assays to *Microenvironments in Haemopoietic and Lymphoid Differentiation* Ruth Porter, Julie Whelan, 2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world *Immunology* Joseph Bellanti, 2013-11-11 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are

extremely grateful for the enthusiastic cooperation and enormous task under taken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies
