**Medical Biochemistry** John F. Van Pilsum, [National Library of Medicine Current Catalog](#) National Library of Medicine (U.S.), **From Hippocrates to COVID-19** Dale A. Stirling, 2023-05-12 The COVID 19 pandemic provides stark evidence of the importance of medicine on a global scale. However revisiting the influenza pandemic of 1918 provided a perspective as we searched for a viable vaccine and instituted public health measures. This shows that medical knowledge is an accumulative process extending to the past and it is in the spirit of that legacy that this bibliography has been compiled. The book is a one stop resource that cites literature related to the historical aspects of medicine. It also acknowledges medicine's global reach and devotes significant effort in that respect. Although the online world seems to dominate on both a social and educational level there is still a need for thoughtfully curated and focused reference works and this bibliography accomplishes that goal. The book has 9 000 citations. It utilizes the WHO's International Classification of Diseases for the section on diseases and disorders and the U.S. Food and Drug Administration's Product Code Classification Database for the section on medical devices, equipment and instruments. It includes detailed subject, geographic and people indexes for an easy reference.

The book covers reference values, sample collection procedure and detailed protocol to perform experiments. Each experiment starts with a brief introduction of the protocol followed by specimen requirements and procedure. The procedures are presented in a very lucid manner and discuss details of calculations and clinical interpretations. The book is divided into 29 chapters. It offers references, general guidelines and abbreviations and provides principles and procedures of clinical biochemistry tests along with their diagnostic importance.

The basic principles that elucidate the reactivity and physical interactions of matter are addressed and quantified with simple approaches. Three dimensional representations of molecules are presented throughout the book so molecules can be viewed as unique entities in their shape and function. The book is focused on the molecular mechanisms of cellular processes in the context of human physiological situations such as fasting, feeding and physical exercise in which metabolic regulation is highlighted. Furthermore the book uses key historical experiments that opened up new concepts in Biochemistry to further illustrate how the human body functions at molecular level helping students to appreciate how scientific knowledge emerges. This book also Elucidates the foundations of the molecular events
