Virology is that branch of microbiology concerned with viruses and diseases These groups of minute infectious agents are with certain exceptions e g poxviruses lack an independent metabolism and replicate only within living host cells Like living organisms they reproduce with genetic continuity and also mutate Normally classified into three subgroups on the basis of host specificity bacterial viruses animal viruses and plant viruses they are also classified by origin mode of transmission symptoms produced and where first located

Human Herpesvirus-6 ,2006-07-04 The present book presents a comprehensive review of Human Herpesvirus 6 HHV 6 infects up to 90% of the world s population and can cause potentially life threatening diseases Clinicians typically do not search for HHV 6 and if they do they will find only few laboratories providing the necessary diagnostic tests that can differentiate between active and latent infection Adding to this problem is that scientists still disagree about whether serological or molecular assays will be the best diagnostic test yet there is no disagreement about the inadequacy of many of the currently existing assays Consequently our knowledge of etiology and pathogenesis of HHV 6 associated diseases can only come from the combined efforts of clinicians virologists molecular biologists and pathologists It is the prime task of this book to summarize the status quo of HHV 6 research and to further stimulate such a collaboration It will be a valuable reference for both clinical and basic scientists including epidemiologists virologists practicing clinicians and infectiologists pathologists and essentially all scientists entering the field of herpes virus research *International Books in Print* ,1991 Bibliographic Guide to Conference Publications New York Public Library.
