Medical Image Databases Stephen T.C. Wong,1998-09-30 Medical Image Databases covers the new technologies of biomedical imaging databases and their applications in clinical services education and research Authors were selected because they are doing cutting edge basic or technology work in relevant areas This was done to infuse each chapter with ideas from people actively investigating and developing medical image databases rather than simply review the existing literature The authors have analyzed the literature and have expanded on their own research They have also addressed several common threads within their generic topics These include system architecture standards information retrieval data modeling image visualizations query languages telematics data mining and decision supports The new ideas and results reported in this volume suggest new and better ways to develop imaging databases and possibly lead us to the next information infrastructure in biomedicine Medical Image Databases is suitable as a textbook for a graduate level course on biomedical imaging or medical image databases and as a reference for researchers and practitioners in industry

**Medical Image Storage Sysytem [sic] for Metadata-based Retrieval** Selwyn Onyebuchi Igwe,2011 Large image databases have been used in various applications and in recent years The major prerequisite of these databases is the means by which their contents can be indexed and retrieved This dissertation presents an attempt to improve image storage using image data representation model that integrates both metadata and content based image description in ORDBMS Object Relational Database Management systems This dissertation research is verified using real examples from the medical domain Both image and salient objects are considered in this model A prototype called MISS Medical Image Storage System has been realized to validate the key aspect of the approach used This research work also presents initial work on the design and implementation of a prototype Medical Image Database System for the core medical image modalities Based on a novel image data model and an original data repository model this representation also supports salient object relational data and

adheres to the Digital Imaging and Communication in Medicine DICOM Standard This standard along with storage metadata retrieval and processing of medical images are widely studied and researched in the domain of medical imaging The efficiency of any image retrieval is strongly related to the representation of the model The better the features of the image are represented in the metadata the more efficient the image retrieval technique is able to satisfy complex queries An object relational database such as Oracle s multimedia formerly known as Oracle interMedia can provide a seamless integration of image data and metadata A sample prototype application is presented in this research work This representation can be applied to different application areas using the Object Relational DBMS model The Image databases are partitioned into similar images either by using a cluster generation technique or by using external information about the content of the image It is also important to state that the research study only focuses on efficient medical imaging storage and retrieval using metadata and not on content based retrieval CBR using image processing techniques Medical Imaging II: Image data management and display ,1988 Image Databases Vittorio Castelli, Lawrence D.
