to fluoropyrimidines. Physicians said Voltaire pour drugs they know little for diseases they know even less into patients they know nothing about. Medicine has made tremendous progress since the eighteenth century. Yet there are fields where quite a lot remains to be learned. In developed countries 25% of breast cancers occur in patients aged 75 years and older. Yet these patients represent only 4% of the population of traditional clinical trials. That ought to let us wonder how relevant data acquired in patients in their 60s are to a nonagenarian. Fortunately, geriatric oncologists have been stepping up to the task and have generated data to help us to treat such patients.

**Advances in Breast Cancer Management, 2nd edition** William J. Gradishar, William C. Wood, 2013-03-09. The optimal management of breast cancer patients relies on the expertise of a team of medical specialists including radiologists, surgeons, radiation therapists and medical oncologists. Much of the progress in breast cancer management made over the last several years reflects the translation of observations made in the laboratory to the clinic. Critically evaluating the impact of new treatment approaches relies on a commitment to well designed clinical trials. In this volume, *Advances in Breast Cancer Management*, a renowned group of breast cancer experts have been asked to provide their perspective on management issues that directly effect patients on a day to day basis. Dr. Melody Cobleigh discusses the consequences of estrogen deprivation and the ways of ameliorating secondary symptoms and the potential long term morbidity. Drs Haigh and Giuliano review the sentinel lymph node biopsy technique including results from their extensive experience. Dr Abram Recht places into perspective the potential benefit of post mastectomy radiotherapy and reviews recent trials that address this issue. Dr Dennis Slamon takes us from the laboratory to the clinic in explaining the development of Herceptin as a paradigm for therapy targeted to specific molecular characteristics of breast cancer tumor cells. Drs Nieto, Shpall, Crump and Pritchard offer different perspectives on the future of high dose chemotherapy with stem cell transplantation as a treatment for breast cancer patients.

Management of Breast Diseases Ismail Jatoi, Manfred Kaufmann, 2010-02-11. In 2002 Lippincott published the Manual of Breast Diseases edited by Professor Ismail Jatoi. The current book Management of Breast Diseases is an adaptation of that manual with Professor Manfred Kaufmann of the Goethe University of Frankfurt serving as co editor. Most of the chapters from the original manual have been either extensively revised or discarded and several new chapters added. This text contains more material than the original manual but it is still intended as a basic guide for the wide spectrum of clinicians surgeons gynecologists oncologists radiation oncologists internists general practitioners who treat breast diseases both benign and malignant. To compile this text we assembled experts from throughout the world. Thus this text provides not only a broad overview of breast diseases but also highlights different perspectives from different parts of the world. Yet it is worth noting that the management of breast cancer is now largely predicated on evidence based medicine. Several large randomized prospective trials have demonstrated the efficacy of breast cancer screening and chemoprevention. Other large trials have addressed the impact of systemic therapy radiotherapy and variations in local therapy on breast cancer mortality. Many of these landmark trials are discussed in this text and they clearly have had a beneficial effect. Indeed since about 1990 breast cancer mortality rates have declined substantially in most industrialized countries and this trend is expected to continue in the years ahead.
