Medical Management of HIV and AIDS Ann Millar, 2012-12-06 In the decade since AIDS was first recognised the enormous and worldwide social and medical implications of this disease have been increasingly recognised The exponential increase in the number of people infected with HIV has been paralleled by the written literature on the subject When this book was initially conceived the question was why another book It seemed to me at that time and since that as HIV presented ever more complex problems they were best solved when considered within a wider context using basic principles of individual medical specialties and applying them For this reason all the chapter authors were experienced in a particular field and applied that knowledge to HIV All the authors were working at the Middlesex Hospital in London when the AIDS services there were expanding to fill a need from 2 beds in 1986 to two wards today The authors were frontline staff looking after all aspects of HIV infection within a wider general medical context Many are now consultants or senior lecturers It is the aim of the book to provide an insight into HIV and AIDS as a overview for someone starting to work in this field or who sees such patients occasionally and requires some basic guidelines For this reason the chapters are based predominantly on organ systems and are divided into sections covering the presentation methods of investigation and treatment or action required of relevant conditions

**Medical Management of Hiv/AIDS** Seth Phelps, 2020-09-22 The human immunodeficiency virus HIV causes HIV infection which later develops into acquired immunodeficiency syndrome AIDS This condition leads to a progressive failure of the immune system which allows certain life threatening opportunistic infections and cancers to affect the body HIV infection may be transmitted sexually such as by contact with vaginal fluids semen or pre ejaculate It may also be transferred from an infected mother to child during pregnancy and childbirth through breast milk contaminated blood transfer etc HIV infects the helper T cells macrophages and dendritic cells of the human immune system Such infection results in low levels of CD4 T cells through

various mechanisms. When these cells decline below a critical level, cell-mediated immunity is lost and the body becomes susceptible to opportunistic infections. There is no effective vaccine or cure for HIV/AIDS. Treatment strategies attempt to slow the progression of the disease with highly active antiretroviral therapy and manage the occurrence of opportunistic infections. A healthy diet is generally promoted for the management of AIDS. This book is a valuable compilation of topics ranging from the basic to the most complex advancements in the understanding of HIV/AIDS. From theories to research to practical applications, case studies related to all contemporary topics of relevance to this infection have been included herein. It is appropriate for students seeking detailed information in this area as well as for experts.

This book is provided as a resource for physicians and other health care professionals in providing care and treatment to patients with HIV/AIDS. Recommendations presented here are based largely on US federal guidelines for antiretroviral therapy for adults, pregnancy management, prophylaxis and treatment of opportunistic infections, management of occupational exposure, management of co-infection with tuberculosis, hepatitis B and hepatitis C, prevention of transmission, and management of sexually transmitted infections. Based on recent advances, there has been substantial expansion of and change in sections dealing with adverse reactions and treatment options following virologic failure. The authors have provided recommendations based on available data and personal experiences and opinions as well as guidelines from authoritative sources. This is the 16th edition and was completed in October 2011. Developments in treatment guidelines occurring after that time do not appear in this edition. Updates will be available on the Johns Hopkins AIDS Service Web site ([www.hopkinsaids.edu](http://www.hopkinsaids.edu)).
