The History of Oncology D. J. Th. Wagener, 2009-07-13 The story of oncology is not only fascinating but also contains many accounts of dead ends chance discoveries illusions mistakes and disappointments alongside the few successes These words are taken from the introduction to this book The author professor emeritus of Medical Oncology reviews all aspects of the problem of cancer from a historical perspective from the oldest existing records to the latest scientific and medical advances It will interest the many people engaged in the treatment of cancer to read how the current therapeutic methods came about and the book may also provide inspiration for cancer researchers and for all those directly or indirectly involved with cancer The layman looking for background information on a particular treatment may find it useful too The various chapters can be read independently A glossary and a few explanatory diagrams augment the text This book grew out of an invitation the author received to lecture on the history of oncology During his background reading he discovered that there was no single volume dealing with the entire history of the subject Fortunately however a great deal of information could be found here and there in the literature As he read he was struck by the fascinating stories behind many discoveries and felt impelled to put them together in a single comprehensive account The results of his labors are presented in this remarkable volume The author Prof D J Th Theo Wagener was head of the department of Medical Oncology at the Radboud University Nijmegen Medical Centre in the Netherlands from 1982 to 2001 chairman of the Educational Committee of the European Society of Medical Oncology ESMO a member of the Educational Committee of the American Society of Clinical Oncology ASCO and a member of various international scientific working groups mainly of the European Organization for Research and Treatment of Cancer EORTC

treatments in many areas of oncology feature such as breast cancer gastrointestinal thoracic urological oncology head and neck tumors bone tumors sarcomas and palliative care An excellent source for young physicians and researchers in the field of oncology this book furthers understanding of medical oncology practice and facilitates professionals treatment of cancer patients It sets the direction for future research in the field and will become the readers regular working tool      **Lessons Learned** David M. Mastrianni, M.d.,2017-11-10 Cancer sucks These two words are embossed on a small metal pin given to me by a patient I could never wear it so it sat on my desk for years a bleak reminder of a sentiment shared by our patients and their families Yet even on the worst days in our oncology unit laughter and life could be heard in the exam rooms and treatment area As a family member once said I used to think heroes were those who do something extraordinary But now I know that heroes are also those people who keep doing the ordinary without complaint in extraordinarily difficult circumstances These are the stories of these heroes Someday this pin will be wrong Soon it may be less true A transformation in cancer treatment is underway in which traditional chemotherapy is being replaced with molecularly targeted therapies based on our rapidly evolving knowledge This change is the result of years of investment in basic science to understand the workings of normal tissues and thus cancer It is the culmination of many events some obvious and others seemingly small which have occurred in labs and clinics across the world It is the work of thousands of scientists physicians nurses technicians administrators investors executives politicians families and patients For those with cancer this era is bringing new hope mixed with the enduring struggle to make sense of the human condition These are also the stories of this transformation This book follows the patients seen during one typical day in our medical oncology practice in Saratoga Springs New York Some patients are undergoing traditional chemotherapy while others receive new targeted treatments Some have dealt with their cancers for years and are witness to both sides of this transition All of them have lives outside of their cancers Contained within these patient stories are short non fictional essays on the history of cancer and medicine For many years I have been privileged to serve on the faculty of Albany Medical College and supervise rotating medical students These essays grew from the discussions which took place as I worked with these brilliant and dedicated young men and women I have learned much from these students most importantly that our medical future is in good hands I hope patients families and others in the world of cancer medicine will find these stories and essays interesting      *Medical Oncology* Richard Pazdur,1995
