Evidence-Based Medicine and the Changing Nature of Health Care Institute of Medicine, LeighAnne M. Olsen, Elizabeth G. Nabel, J. Michael McGinnis, Mark B. McClellan, 2008-09-06

Drawing on the work of the Roundtable on Evidence Based Medicine the 2007 IOM Annual Meeting assessed some of the rapidly occurring changes in health care related to new diagnostic and treatment tools emerging genetic insights the developments in information technology and healthcare costs and discussed the need for a stronger focus on evidence to ensure that the promise of scientific discovery and technological innovation is efficiently captured to provide the right care for the right patient at the right time As new discoveries continue to expand the universe of medical interventions treatments and methods of care the need for a more systematic approach to evidence development and application becomes increasingly critical Without better information about the effectiveness of different treatment options the resulting uncertainty can lead to the delivery of services that may be unnecessary unproven or even harmful Improving the evidence base for medicine holds great potential to increase the quality and efficiency of medical care The Annual Meeting held on October 8 2007 brought together many of the nation s leading authorities on various aspects of the issues both challenges and opportunities to present their perspectives and engage in discussion with the IOM membership

Next Medicine: The Science and Civics of Health Walter Bortz, MD, 2011-01-03 Every year the average American spends about 7 300 on medical expenses The typical Canadian pays 2 700 the Briton only 2 000 And yet according to the World Health Organization our healthcare system in terms of total quality ranks thirty eighth in the world right between Costa Rica and Slovenia Not only do 40 million Americans lack health insurance but more than 200 000 die each year because of medical mistakes Our average life expectancy is lower than Cuba s In Next Medicine Dr Walter Bortz zeroes in on why the American medicine is spiraling toward disaster A physician with fifty years of experience and a leading authority on aging Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system Thanks to them medicine

today is economically motivated to treat disease rather than to prevent it Heart disease for example is widely treated with drug interventions and invasive surgery both of which are extravagantly profitable for pharmaceutical giants and hospitals Daily exercise and a healthy diet on the other hand can prevent heart disease and can be obtained by patients essentially for free but there s no money in that The medical industrial complex has a vested interest in keeping us sick and until that changes medicine will fail to effectively address the leading cause of disability and mortality today chronic diseases like diabetes that are largely preventable Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices along with new training for medical professionals Through a lively narrative full of personal anecdotes and jarring statistics Bortz makes a powerful case for a radically new medical system one that is based on rigorous science and loosens the strangle hold of corporate interests on American health

Aztec Medicine, Health, and Nutrition Bernard Ortiz de Montellano, 1990 Why were a handful of Spaniards able to overthrow the Aztec Empire The dramatic destruction of the Aztecs has prompted historians anthropologists demographers and epidemiologists to look closely at the health and nutrition of the Valley of Mexico If the Aztecs were overcrowded living at the edge of starvation and incapable of treating disease effectively then their decimation by the Europeans becomes much easier to undestand Bernard Ortiz de Montellano argues that such hypotheses do not hold up Rather at the time of the Conquest the Aztecs were a thriving well nourished healthy people The swift brutal success of the conquistadors cannot be explained by the prior ill health or medical incompetence of their victims To support his case Ortiz de Montellano uses an
