

## Changing Medicine, Changing Society

*I think Marx matters to medicine for three reasons. First, Marx offers a critique of society ... that enables explication of disquieting trends in modern medicine and public health—privatised health economies, the power of conservative professional elites, the growth of techno-optimism, philanthrocapitalism, the importance of political determinants of health, global health's neoimperialist tendencies, product-driven definitions of disease, and the exclusion of stigmatised communities from our societies ... Second, Marxism defends a set of values. The free self-determination of the individual, an equitable society, the end of exploitation, deepening possibilities for public participation in shaping collective choices, refusing to accept the fixity of human nature and believing in our capacity to change, and keeping a sense of the interdependence and indivisibility of our common humanity. Finally, Marxism is a call to engage, an invitation to join the struggle to protect the values we share (Horton, 2017).*

So far, this book has focused on the negative aspects of the medical contribution. This has partly been a conscious attempt to correct the prevalent but unbalanced view that medical interventions no matter how small, can only be good and that health workers always make a positive contribution to health.

What then should be the role of those concerned with health? What should be done by those who see the necessity for the promotion of health, as well as the prevention and cure of disease? How, in short, can health workers, both in rich and poor countries, become part of the solution to underdevelopment and ill-health, rather than part of the problem?

Health problems are rooted in social conditions. This is true in all countries, irrespective of their level of development. In former colonies these social conditions are determined by a global economic and political system that ensures underdevelopment.

Historically, the two most important measures to promote health in developed countries were improved nutrition and better environmental hygiene. The same measures are needed to promote health in poor countries today. But the task of ending underdevelopment is not just a repetition of the development that took place in Britain and the other advanced capitalist countries. We have seen how the accumulation of capital for industrial development in those countries came from exploiting the colonial world. The former colonies today have no colonies to exploit—they have no easy source of capital and only small markets for their goods. Since the advent of imperialism, the economies of former colonies have become increasingly controlled by huge foreign-owned enterprises—transnational corporations (TNCs)—in alliance with a local ruling class.

*Professionalizing Medicine* John M. Harris Jr., 2019-03-12 This biography of James Edmund Reeves whose legislative accomplishments cemented American physicians control of the medical marketplace illuminates landmarks of American health care the troubled introduction of clinical epidemiology and development of botanic medicine and homeopathy the Civil War's stimulation of sanitary science and hospital medicine the rise of government involvement the revolution in laboratory medicine and the explosive growth of phony cures It recounts the human side of medicine as well including the management of untreatable diseases and the complex politics of medical practice and professional organizing Reeves life provides a reminder that while politics economics and science drive the societal trajectory of modern health care moral decisions often determine its path      The Struggle for Health David Sanders, 2023-02-27 The first edition of *The Struggle for Health* was published in 1985 and was widely acclaimed by those seeking a broader and deeper political understanding of ill health beyond the medical model of care It was a revolutionary book charting new ways of understanding and tackling the causes of ill health and suggesting strategies to enable health for all This second edition includes health problems that have emerged since the 1980s notably HIV AIDs COVID 19 and other epidemics and the increase in non communicable diseases such as cardiovascular disease and diabetes It examines some of the health impacts of globalization specifically on the food and pharmaceutical value chains and considers the consequences of climate change on the health of populations However this edition does not depart from the core message of the original book Health for All can only be achieved through a more equitable distribution of wealth resources and power *The Struggle for Health Second Edition* utilises the same approach as the first with a narrative that begins with diseases then describes historical trends and the limitation of the medical and commercial model of care At each juncture it asks the question WHY why do people especially children still die in large numbers throughout the world from wholly preventable diseases Why is it that appropriate provision for health care is not available to every individual in the world What changes can be made to improve this situation Most importantly this edition presents a strengthened call to action building upon the original work and advocating for systemic changes to ensure justice
