Mediastinal Tumors:

The Mediastinal Mass Renato Franco, Federica Zito Marino, Antonio Giordano, 2018-08-01 Tumors of the mediastinum are usually diagnosed in young patients but they can develop at any age and form any tissue that exists in or passes through the chest cavity. The diagnosis and the accurate assessment of the mediastinum masses represents a challenge given their clinical variability from asymptomatic to producing symptoms of cough, chest pain, and dyspnea. Mediastinal tumors encompass a wide range of various neoplasms. The localization of mediastinal masses is critical in the diagnosis: the anterior mediastinal masses are generally thymomas, teratomas, substernal thyroid, parathyroid tissue, or lymphomas; the middle mediastinum masses are typically pericardial and bronchogenic cysts; the posterior mediastinum masses are often neurogenic tumors and esophageal cysts. The wide variety of different entities demonstrates a heterogeneous spectrum of clinical and pathologic features, suggesting that a uniform standard management of these patients is not appropriate. In this context, the proposed book will provide a comprehensive review of the mediastinal tumors according to different sites of the diseases, including the masses of anterior, middle, and posterior mediastinum. The handling of these tumors requires a multidisciplinary approach due to the complex anatomy of the mediastinum as well as the different clinical, radiographic, and prognostic features. This book has risen from the desire to provide to the specialists in the field an easy, updated, and practical guidelines, title to facilitate the clinical practice of mediastinal masses. This book will be a comprehensive guide to clinical best practices developed through the opinions of experts in the field. *Mediastinal Tumors and Pseudotumors I.*

Besznyák, B. Szende, K. Lapis, 1984-11-26 Mediastinal Pathology Neda Kalhor, Cesar Moran, 2019-04-25 The mediastinum is a hollow space within the thoracic cavity that may give rise to a wide spectrum of tumoral conditions, from the benign to the intermediate to the highly malignant neoplasms. In addition, other inflammatory and infectious conditions may also arise in this space, which renders the practice of mediastinal pathology almost a general surgical pathology practice. However, there are numerous mediastinal conditions that are important not only for diagnosis but also for treatment and clinical outcome. Due to the unusual location and because of the complexity of the tumors occurring in the mediastinum, there are only a few experts in this particular anatomic area. In fact, there are no more than 3-4 individuals worldwide with enough experience to properly diagnose, classify, and make treatment suggestions when these tumors arise in the mediastinum. More recent developments in tumor diagnosis and classification have created a vacuum in the general pathologist who often is confronted with this pathology and becomes uneasy about the specifics. For instance, recent developments in tumor pathology have led to the classification and staging of mediastinal tumors in more innovative ways that are in need of proper highlighting. Needless to say, even though there are a few publications on mediastinal pathology, the books are either obsolete or incomplete in addition of providing superficial knowledge. Unfortunately, and with all due respect to the authors of those publications, neither of those books is written by experts in the area. Rather, the books were written out of the lack of

information in mediastinal pathology Even the World Health Organization WHO publication which is truly more on lung and pleural neoplasms has inserted in its contents a portion of mediastinal tumors such portion not only is superficial and incomplete but also at least highly controversial ifnot flat out incorrect This text s goal is to present comprehensive and up to date information of the diverse pathology that can be encountered in the mediastinal compartment The book will be divided in 11 different chapters based on the lineage of the diverse tumors that occur in the mediastinum i e epithelial neuroendocrine lymphoid etc see table of contents In addition two separate chapters will be included one on the radiological aspects and the others on the surgical approach to the different mediastinal tumors bringing a total of 13 chapters In the pathology section the book will include current staging and classification systems of the different tumors In addition it will address the most current criteria for diagnosis and the differential diagnosis Although the emphasis of the book is on diagnostic surgical pathology every chapter will include the use of immunohistochemical techniques electron microscopy and molecular biology when necessary The book will be extensively illustrated so that the reader will benefit of the different histomorphology of mediastinal tumors Because of the nature of this specific anatomic area and the need to develop a standard text Mediastinal Pathology should be of high interest to general surgical pathologists thoracic pathologists in particular as well as thoracic surgeons oncologists and radiologists Needless to say this book will be of interest to pathology residents and fellows as well as to those seeking more in depth knowledge of thoracic mediastinal pathology *Pathology of the Mediastinum* Alberto M. Marchevsky,Mark R. Wick,2014-02-06 This book provides a comprehensive up to date review of the pathology of the neoplastic and non neoplastic diseases that occur in the mediastinum The pathologic and relevant clinical features are discussed and detailed diagnostic criteria for various diseases are given along with information about the most relevant laboratory tests The features of thymomas thymic carcinomas neuroendocrine carcinomas and germ cell tumors are discussed in detail including the utilization of immunostains and other ancillary tests in diagnosing these diseases An algorithmic approach to the differential diagnosis of mediastinal lymphomas is given and a novel clinico pathologic classification helps readers diagnose and treat thymomas Cardiac lesions mesothelioma and other intrathoracic lesions are also reviewed The book features more than 650 images and downloadable copies of these are included on a CD ROM packaged with the print book Pathology of the Mediastinum will be of interest to practising surgical pathologists thoracic surgeons oncologists and radiologists Mediastinal Tumors Douglas E. Wood,Charles R.Jr. Thomas,D.E. Wood,C.R., Jr. Thomas,1995 Primary mediastinal tumors are relatively rare The relative incidence of these tumors indicates that neurogenic tumors are the most common tumor seen constituting 21 % of all cases thymomas 19% lymphomas 12 5% germ cell tumors 10% primary carcinomas 4 6% mesenchymal tumors 6% endocrine tumors 6% cysts 18% In adults the majority of thyroid tumors thymomas mediastinal germ cell tumors and teratomas are located in the superior and anterior mediastinum Of the neurogenic tumors 18% are located in the posterior mediastinum and 50% of mediastinal lymphomas are in the middle

mediastinum In adults the incidence of anterosuperior middle and posterior mediastinal tumors is about 54% 20% and 26% respectively However in children the posterior mediastinum contains 63% of the lesions the anterior mediastinum contains 26% and the middle mediastinum 2% The majority of the tumors are benign in character with a ratio of benign to malignant of about 60 to 40 The relative incidence of malignant mediastinal tumors in children is about 50% Even though mediastinal tumors are not common they represent a unique problem with regards to treatment whether by surgery radiation therapy and or systemically administered chemotherapy The volume by WOOD and THOMAS deals with each of these issues in detail and presents a logical and important approach to the management of mediastinal tumors
