Medical Laser Endoscopy:

Medical Laser Endoscopy D.M. Jensen, J.M. Brunetaud, 2012-12-06 There has been incredible progress over the last decade in therapeutic endoscopy. Such therapies are either easier now than ten years ago or are possible when previously they were inconceivable. These advances have depended upon major improvements in diagnostic endoscopy for different subspecialties. Simultaneously a major innovation for therapeutics through endoscopes is the application of medical lasers. This book is written by renowned biophysicists and laser endoscopists of different sub specialties where the application of lasers has revolutionized medical care. In some cases treatments which were not previously possible are now routine. Laser palliation of obstructing tumors in different sub specialties is an example of this. In other cases resective surgery is obviated by the application of lasers via endoscopy such as for the control of gastrointestinal bleeding. The authors of different medical or surgical subspecialties which use endoscopic lasers write about the pathology and clinical problems, their personal experience and results. However they also emphasize their techniques of laser endoscopy through case examples, technical discussions and colored illustrations. Their discussions will give the reader a better understanding about the role of laser treatment of different conditions compared to routine medical or surgical therapy. In several instances randomized controlled trials involving medical lasers were discussed in this book because they fundamentally changed our understanding of common problems such as upper gastrointestinal bleeding. We predict continued progress in therapeutic endoscopy.

Therapeutic Laser Endoscopy in Gastrointestinal Disease David E. Fleischer, David Jensen, Peter Bright-Asare, 2012-12-06 The endoscopic use of lasers in the treatment of gastrointestinal diseases began within the last decade and has evolved rapidly. Work is now being done at more than 150 centers in Europe, the United States, Japan and the rest of the world. To date no publication has defined the state of the art. This text attempts to fill that void. To disseminate information about therapeutic laser endoscopy, an increasing number of short courses have been sponsored in the United States wherein the attendee hears didactic lectures, views video tapes and in addition has the opportunity to have a hands on experience with endoscopic laser therapy in the animal labs. This book is an expansion of the material presented in one such course sponsored by The Cook County Hospital in Chicago, Illinois in October 1982. The course was organized by Peter Bright-Asare, M.D., Chairman of Gastroenterology at the time of the course and chaired by Dr. Bright-Asare and myself. Some of the lectures from the course have been broadened and formalized. Other chapters were invited and added. Also included are group discussions about issues that are either controversial or undefined. Attempts were made to secure consensus opinion from experienced investigators in areas where no hard scientific experimental or clinical data exists. The contributors have a wide range of interest and expertise. Dr. **Endoscopic Laser Surgery Handbook** S. M. Shapshay, 2020-11-25 This book is concerned primarily with operative endoscopy utilizing lasers, presenting proved and future endoscopic applications of lasers in medicine. It includes new concepts of cancer therapy such as photodynamic therapy because of the laser's endoscopic
