Vafeidis, Elena Xoplaki, 2020-11-17 The First Mediterranean Assessment Report MAR1 prepared by the independent network of Mediterranean Experts on Climate and environmental Change MedECC founded in 2015 was published in November 2020 MAR1 assesses the best available scientific knowledge on climate and environmental change and associated risks in the Mediterranean Basin in order to render it accessible to policymakers stakeholders and citizens The report has been written by 190 scientists from 25 countries all contributing in individual capacity and without financial compensation The report includes a Summary for Policymakers SPM which comprises the key messages of the MAR1 The UNEP MAP Barcelona Convention Secretariat through its Plan Bleu Regional Activity Center and the Secretariat of the Union for the Mediterranean work in partnership to support MedECC and to contribute to establish a sound and transparent scientific assessment process

The Physical Geography of the Mediterranean Jamie C. Woodward, 2009-05-07 This volume explores the climates landscapes ecosystems and hazards that comprise the Mediterranean world It traces the development of the Mediterranean landscape over very long timescales and examines modern processes and key environmental issues in a wide range of settings The Mediterranean is the only region on Earth where three continents meet and this interaction has produced a very distinctive Physical Geography This book examines the landscapes and processes at the margins of these continents and the distinctive marine environment between them Catastrophic earthquakes explosive volcanic eruptions and devastating storms and floods are intimately bound up within the history and mythology of the Mediterranean world This is a key region for the study of natural hazards because it offers unrivalled access to long records of hazard occurrence and impact through documentary archaeological and geological archives The Mediterranean is also a biodiversity hotspot it has been a meeting place for plants animals and humans from three continents throughout much of its history The Quaternary records of these interactions are more varied and better preserved than in any other part of the world These records have provided important new insights into the tempo of climate landscape and ecosystem change in the Mediterranean region and beyond The region is unique because of the very early and widespread impact of humans in landscape and ecosystem change and the richness of the archaeological and geological archives that chronicle this impact This book examines this history and these interactions and places current environmental issues in long term context Contributors Ramadan Husain Abu Zied Harriet Allen Jacques Blondel Maria Carmen Llasat James Casford Marc Castellnou Andrew Goudie Andrew Harding Angela Hayes Tom Holt

Geological Evolution of the Mediterranean Basin Daniel J. Stanley,Forese-Carlo Wezel,2012-12-06 The Mediterranean Sea nestled between Africa southern Europe and the Middle East may be envisioned as a complex picture puzzle comprising numerous intricate pieces many of which are already in place A general image in terms of science has emerged although at this time large gaps are noted and some areas of the picture remain fuzzy and indistinct In recent years this fascinating mind teasing puzzle image has become clearer with individual pieces more easily recognized and rapidly emplaced largely by means of multidisciplinary and multinational team efforts In this respect the Special Program Panel on Marine Sciences of the NATO Scientific Af fairs Division considered the merits of initiating four conferences bearing on the Mediterranean ecosystem It was suggested that the first emphasizing geology should dovetail with subsequent seminars on physical oceanogra phy marine biology and ecology and man s influence on the natural Medi terranean regime At a conference held in Banyuls sur Mer France in August 1979 Profes sor Raimondo Selli was urged by some panel members to initiate an Ad vanced Research Institute ARI that would focus primarily on the geologi cally recent evolution of the Mediterranean Sea and serve as a logical base for future NATO conferences on the Mediterranean

Brown Trout Javier Lobón-Cerviá, Nuria Sanz, 2017-10-13 Brown Trout Biology Ecology and Management A comprehensive guide to the most current research history genetics and ecology of the brown trout including challenging environmental problems The brown trout is an iconic species across its natural European distribution and has been introduced throughout the World Brown Trout offers a comprehensive review of the scientific information and current research on this major fish species While the brown trout is the most sought species by anglers its introduction to various waters around the world is causing serious environmental problems At the same time introduction of exogenous brown trout lineages threatens conservation of native gene pools of populations in many regions The authors summarize the important aspects of the brown trout's life history and ecology and focus on the impact caused by the species The text explores potential management strategies in order to maintain numerous damaged populations within its natural distributional range and to ameliorate its impacts in exotic environments The authors include information on a wide range of topics such as recent updates in population genetics evolutionary history reproductive traits and early ontogeny life history plasticity in anadromous brown trout and life history of the adfluvial brown trout and much more This vital resource Contains the latest research on the biology and ecology of brown trout Includes information on phylogeography genetics population dynamics and stock management Spotlights the

brown trout's introduction to regions around the world and the serious environmental impacts. Offers a comprehensive review of conservation and management techniques. Written for salmonid scientists and researchers, fishery and environmental managers and students of population genetics, ecology and population dynamics. Brown Trout explores the most recent findings on the history, ecology and sustainability of this much researched species. Biology and Wildlife of the Mediterranean Region Jacques Blondel, James Aronson, 1999. The Mediterranean is an outstanding hot spot of biological diversity. It is exceptional not only for this but also because of its long history of interactions between its human inhabitants and the other fauna and flora of the region. The cradle of many civilizations, the Mediterranean region has been host to humans for thousands of years. This book is the first to synthesise our current understanding of the ecology, biology and geology of Mediterranean animals, birds and plants and their habitats. The authors focus on the unique historical determinants and spatial patterns of Mediterranean biodiversity. In particular, the dramatic impacts of long term human activities on the region's landscapes, flora and fauna are considered. This fascinating story will be of interest to researchers and students in ecology, biology, conservation and geography as well as to naturalists and ecotourists visiting this popular holiday region. Oaks: Physiological Ecology. Exploring the Functional Diversity of Genus Quercus L. Eustaquio Gil-Pelegrín, José Javier Peguero-Pina, Domingo Sancho-Knapik, 2017-12-12. With more than 500 species distributed all around the Northern Hemisphere, the genus *Quercus* L. is a dominant element of a wide variety of habitats including temperate, tropical, subtropical and Mediterranean forests and woodlands. As the fossil record reflects, oaks were usual from the Oligocene onwards, showing the high ability of the genus to colonize new and different habitats. Such diversity and ecological amplitude makes genus *Quercus* an excellent framework for comparative ecophysiological studies, allowing the analysis of many mechanisms that are found in different oaks at different level: leaf or stem. The combination of several morphological and physiological attributes defines the existence of different functional types within the genus, which are characteristic of specific phytoclimates. From a landscape perspective, oak forests and woodlands are threatened by many factors that can compromise their future: a limited regeneration, massive decline processes mostly triggered by adverse climatic events or the competition with other broad leaved trees and conifer species. The knowledge of all these facts can allow for a better management of the oak forests in the future. **Geological Evolution of the Mediterranean Basin** Daniel J. Stanley, Forese-Carlo Wezel, 1985. *Encyclopedia of Biodiversity*, 2013-02-05. The 7 volume *Encyclopedia of Biodiversity* Second Edition maintains the reputation of the highly regarded original, presenting the most current information available in this globally crucial area of research and study. It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it. Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity, ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity. The science of biodiversity has become the science of our future. It is an interdisciplinary

field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms

Mediterranean Type Ecosystems Francesco di Castri, Harold A.

Mooney, 2012-12-06 No other disjunct pieces of land present such striking similarities as the widely separated regions with a mediterranean type of climate that is the territories fringing the Mediterranean Sea California Central Chile and the southernmost strips of South Africa and Australia Similarities are not confined to climatic trends but are also reflected in the physiognomy of the vegetation in land use patterns and frequently in the general appearance of the landscape The very close similarities in agricultural practices and sometimes also in rural settlements are dependent on the climatic and edaphic analogies as well as on a certain commonality in cultural history This is certainly true for the Mediterranean Sea basin which in many ways represents a sort of ecological cultural unit this is also valid for California and Chile which were both settled by Spaniards and which showed periods of vigorous commercial and cultural interchanges as during the California gold rush One other general feature is the massive interchange of cultivated and weed species of plants that has occurred between the five areas of the world that have a mediterranean type climate with the Mediterranean basin region itself as a major source In spite of their limited territorial extension probably no other parts of the world have played a more fundamental role in the history of mankind Phoenician Etruscan Hellenic Jewish Roman Christian and Arab civilizations among others

mountainous shores high biodiversity and spectacular scenery is located at the intersection of Africa and Eurasia Through the 8000 years of human development in this area there have been tremendous changes in its history and biogeography Approximately 300 million people live here today Although the evergreen maquis vineyards olive plantations and natural woodlands cover the lands all over the basin it is facing severe destruction of habitats due to deforestation intensive grazing fires and in particular a severe coastal degradation due to infrastructure development which is changing the landscape Both the historical heritage and geography of the land is facing a great threat due to urbanisation and fragmentation Time has come for its inhabitants to weigh their impact on its ecogeography in order to save the biodiversity as well as the history of

Heaton, 1914 *Recent Dynamics of the Mediterranean Vegetation and Landscape* Stefano Mazzoleni, Gaetano di Pasquale, Mark Mulligan, Paolo di Martino, Francisco Rego, 2004-10-22 The Mediterranean region has been shaped by human activity and maintained by traditional practices of land use for centuries This has affected the distribution of plants and the landscape which can be considered as part of the European cultural landscape This book details the rapid changes that have taken place in the vegetation of the Mediterranean in the last half century a period in which major socio economic development greatly affected the cultural and physical landscape **Natural Environment and Culture in the Mediterranean Region II** Ibrahim Atalay, Recep Efe, Munir Ozturk, 2011-05-25 The Mediterranean Basin is the largest of the five Mediterranean climate regions and one of the largest archipelagos in the world The basin is located at the intersection of two major landmasses Eurasia and Africa and has around five thousand islands which contribute much to its high diversity and spectacular scenery It possesses higher salinity than the Atlantic The shores are chiefly mountainous Earthquakes and volcanic disturbances are frequent Some of the most ancient civilizations flourished around the region Carthagians Greeks Sicilians and Romans were rivals for dominance of its shores and trade The basin virtually became a Roman lake under the Roman Empire Later the region was dominated by the Byzantines and the Arabs The development of the northern regions of Africa and of oil fields in the Middle East has increased its trade The flora is dramatic with over 20 thousand endemic vascular plant taxa and many endemic species of animals Fish about 400 species sponges and corals are plentiful The touristic activities are threatening populations of many species The fragmentation and isolation is increasing due to resort development and infrastructure The overuse of the sea s natural and marine resources continues to be a problem The Mediterranean monk seal the barbary macaque and the Iberian lynx which is Critically Endangered are among the region s imperiled species **Early European civilization** Roscoe Lewis Ashley, 1916
